## Precision Micro-Power Shunt Voltage References

### Description

LM4040 and LM4041 are precision two-terminal shunt mode voltage references offered in factory programmed reverse breakdown voltages of 1.225 V, 2.500 V, 3.000 V, 3.300 V, 4.096 V, and 5.000 V.

ON Semiconductor's Charge Programmable floating gate technology ensures precise voltage settings offering five grades of initial accuracy; from 0.1% to 2%.

LM4040 and LM4041 operate over a shunt current range of 60  $\mu$ A to 15 mA with low dynamic impedance, and 100 ppm/ $^{\circ}$ C temperature coefficient ensuring stable reverse breakdown voltage accuracy over a wide range of operating conditions.

These shunt regulators do not require an external stabilizing capacitor but are stable with any capacitive load (up to 1  $\mu$ F).

Offered in space saving SOT-23 and SC-70 packages LM4040 and LM4041 are specified for operation over the full industrial temperature range of  $-40^{\circ}$ C to  $+85^{\circ}$ C.

### Features

- Reverse Breakdown Voltages:
  - ◆ 1.225 V
  - ◆ 2.500 V
  - ◆ 3.000 V
  - ◆ 3.300 V
  - ◆ 4.096 V
  - ◆ 5.000 V
- Accuracy Grades:
  - ◆ A:  $\pm 0.1\%$
  - ◆ B:  $\pm 0.2\%$
  - ◆ C:  $\pm 0.5\%$
  - ◆ D:  $\pm 1.0\%$
  - ◆ E:  $\pm 2.0\%$
- Operating Current: 60  $\mu$ A to 15 mA
- Low Output Noise: 35  $\mu$ V (10 Hz to 10 KHz)
- Small Package Size: SOT-23, SC-70
- These Devices are Pb-Free, Halogen Free/BFR Free and are RoHS Compliant

### Typical Applications

- Mobile Handheld Devices
- Industrial Process Control
- Instrumentation
- Laptop and Desktop PCs
- Automotive
- Energy Management

### PIN CONNECTIONS

(SOT-23)

(SC-70)

### ORDERING INFORMATION

See detailed ordering and shipping information in the package dimensions section on page 10 of this data sheet.

## LM4040, LM4041

**Figure 1. Test Circuit**

**Table 1. PIN DESCRIPTIONS**

Pin		Name	Function
SOT-23	SC-70		
1	3	V+	Positive voltage
2	1	V-	Negative voltage
3	2	NC	This pin must be left floating or connected to V-.
	4	NIC	No Internal Connection. A voltage or signal applied to this pin will have no effect.
	5	NIC	

**Table 2. ABSOLUTE MAXIMUM RATINGS**

Parameter	Rating	Unit
Reverse Current	20	mA
Forward Current	10	mA
Junction Temperature	150	°C
Power Dissipation	SOT-23-3	300
Power Dissipation	SC-70-5	240
		mW

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

**Table 3. RECOMMENDED OPERATING CONDITIONS**

Parameter	Rating	Unit
$I_{REVERSE}$	0.06 – 15	mA
Ambient Temperature Range	-40 to +85	°C

**Table 4. ESD SUSCEPTIBILITY**

Symbol	Parameter	Min	Units
ESD	Human Body Model	2000	V
	Machine Model	200	V

## Device Description

The LM404x shunt references use ON Semiconductor's floating gate (EEPROM) technology to produce a capacitor which stores an accurate and stable voltage that is used as the reference voltage for a control amplifier and shunt N-channel FET.

Figure 12. Functional Block Diagram

The device operates like a zener diode; maintaining a fixed voltage across its output terminals when biased with 60  $\mu\text{A}$  to 15 mA of reverse current. The LM404x will also act like a silicon diode when forward biased with currents up to 10 mA.

## Applications Information

The LM404x's internal pass transistor maintains a constant output voltage by sinking the necessary amount of current across a source resistor. The source resistance ( $R_S$ ) is set by the load current range ( $I_{LOAD}$ ), supply voltage ( $V_S$ ) variations, LM404x's terminal voltage ( $V_R$ ), and desired quiescent current.

Figure 13. Typical Operating Circuit

To select a value of  $R_S$ , set  $V_S$  at its minimum value and  $I_{LOAD}$  at its maximum. Be sure to maintain a minimum operating current of 60  $\mu\text{A}$  through LM404x at all times, as LM404x uses this current to power its internal circuitry. The  $R_S$  value should be large enough to keep  $I_{SHUNT}$  less than 15 mA for proper regulation when  $V_S$  is maximum and  $I_{LOAD}$  is at a minimum. Therefore, the value of  $R_S$  is bounded by the following equation:

$$\frac{(V_{S(\min)} - V_R)}{(60 \mu\text{A} + I_{LOAD(\max)})} > R_S$$

and

$$R_S > \frac{(V_{S(\max)} - V_R)}{(15 \text{ mA} + I_{LOAD(\min)})}$$

Choosing a larger resistance minimizes the power dissipated in the circuit by reducing the shunt current.

## Output Capacitance

The LM404x does not require an external capacitor for frequency stability and is stable for any output capacitance.

## Effect of Temperature

LM404x has an output voltage temperature coefficient of typically  $\pm 15$  to  $\pm 30$  ppm/ $^{\circ}\text{C}$  meaning the LM404x's output voltage will change by 50 – 100  $\mu\text{V}/^{\circ}\text{C}$  for a 3.300 V regulator. The polarity of this temperature induced voltage shift can vary from device to device, some moving in the positive direction and others in the negative direction.

Table 6. ORDERING INFORMATION

Part Number	Specific Device Marking	Voltage	Accuracy	Max Drift	Temperature Range	Package (Note 3)
LM4040BTB-250GT3	4L	2.500 V	$\pm 0.2\%$	100 ppm/ $^{\circ}\text{C}$	-40 $^{\circ}\text{C}$ to 85 $^{\circ}\text{C}$	SOT-23-3
LM4040BTB-300GT3		3.000 V	$\pm 0.2\%$	100 ppm/ $^{\circ}\text{C}$		
LM4040BTB-409GT3		4.096 V	$\pm 0.2\%$	100 ppm/ $^{\circ}\text{C}$		
LM4040BTB-500GT3		5.000 V	$\pm 0.2\%$	100 ppm/ $^{\circ}\text{C}$		
LM4041CSD-122GT3	4M	1.225 V	$\pm 0.5\%$	100 ppm/ $^{\circ}\text{C}$	-40 $^{\circ}\text{C}$ to 85 $^{\circ}\text{C}$	SC-70-5

- Tape & Reel, 3,000 Units / Reel
- All packages are RoHS-compliant (Lead-free, Halogen-free).
- The standard lead finish is NiPdAu.
- For information on tape and reel specifications, including part orientation and tape sizes, please refer to our Tape and Reel Packaging Specifications Brochure, BRD8011/D.
- For detailed information and a breakdown of device nomenclature and numbering systems, please see the ON Semiconductor Device Nomenclature document, TND310/D, available at [www.onsemi.com](http://www.onsemi.com)
