## PWM Step-up Controller

### ❖ GENERAL DESCRIPTION

The AX5302 is high efficient PWM step-up controller. Designed to drive an external N-channel MOSFET, Output voltage is programmable with 1.0V of standard voltage supply internal, and using externally connected components, output voltage (FB) can be set up at will.

The AX5302 can be operated at switching frequencies of 500kHz allowing for easy filtering and low noise, the size of the external components can be reduced. An enable function and thermal shutdown functions are built inside. The soft-start time can be programmed by outside capacitor; the function prevents overshoot at startup.

### ❖ FEATURES

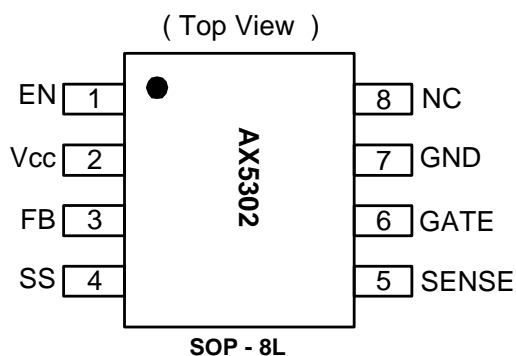

- Input voltage: 3.0V to 24V
- Output voltage: Define by N-channel MOS
- Duty ratio: 0% to 85% PWM control
- Oscillation frequency: 500KHz ( $\pm 20\%$ )
- Soft-start time is programmed by outside capacitor
- Current Limit is setting by outside resistance
- Thermal shutdown protection
- Enable/shutdown function
- External SW N-channel MOS.
- SOP-8L Pb-Free Package.

### ❖ BLOCK DIAGRAM

❖ **PIN ASSIGNMENT**

This package of AX5302 is SOP-8L; the pin assignment is given by:

Name	Description
<b>EN</b>	Shutdown Control Input. H : normal operation L : Shutdown mode
<b>FB</b>	Feedback pin
<b>V<sub>CC</sub></b>	VCC supply pin
<b>SENSE</b>	Current Limit Sense Voltage
<b>SS</b>	Soft-Start pin
<b>GATE</b>	Gate drive for external N-channel MOSFET.
<b>GND</b>	Signal ground pin
<b>NC</b>	No connection

❖ **ORDER/MARKING INFORMATION**

Order Information	Top Marking
<p><b>AX5302 X X</b></p> <p>Package Type      Packing</p> <p>S: SOP-8L          Blank : Tube</p> <p>A : Taping</p>	<p>Logo ← <b>AX</b> 5 3 0 2 → Part number</p> <p>YY WW X → ID code:internal</p> <p>WW: 01~52</p> <p>Year: 10=2010 11=2011</p>

❖ **ABSOLUTE MAXIMUM RATINGS** (at T<sub>A</sub>=25°C)

Characteristics	Symbol	Rating	Unit
VCC Pin Voltage	V <sub>CC</sub>	V <sub>SS</sub> - 0.3 to V <sub>SS</sub> + 26	V
Feedback Pin Voltage	V <sub>FB</sub>	V <sub>SS</sub> - 0.3 to 12	V
EN Voltage	V <sub>EN</sub>	V <sub>SS</sub> - 0.3 to V <sub>CC</sub>	V
SENSE Voltage	V <sub>SENSE</sub>	V <sub>SS</sub> - 0.3 to V <sub>CC</sub>	V
SS Pin Voltage	V <sub>SS</sub>	V <sub>SS</sub> - 0.3 to V <sub>CC</sub>	V
Gate Pin Voltage	V <sub>GATE</sub>	V <sub>SS</sub> - 0.3 to V <sub>CC</sub>	V
Power Dissipation	PD	Internally limited	mW
Storage Temperature Range	T <sub>ST</sub>	-40 to +150	°C
Operating Junction Temperature Range	T <sub>OPJ</sub>	-20 to +125	°C
Operating Supply Voltage	V <sub>OP</sub>	+3 to +24	V
Thermal Resistance from Junction to case	θ <sub>JC</sub>	40	°C/W
Thermal Resistance from Junction to ambient	θ <sub>JA</sub>	120	°C/W

Note: θ<sub>JA</sub> is measured with the PCB copper area of approximately 1 in<sup>2</sup> (Multi-layer).

❖ **ELECTRICAL CHARACTERISTICS**

(V<sub>IN</sub> = 5V, V<sub>OUT</sub>=12V, T<sub>A</sub> = 25°C, unless otherwise specified)

Characteristics	Symbol	Conditions	Min	Typ	Max	Units
Feedback Voltage	V <sub>FB</sub>	I <sub>OUT</sub> =0.1A	0.975	1.000	1.025	V
Quiescent Current	I <sub>CCQ</sub>	V <sub>FB</sub> =1.5V force driver off	-	4	6	mA
Feedback Bias Current	I <sub>FB</sub>	I <sub>OUT</sub> =0.1A	-	0.1	0.5	uA
Shutdown Supply Current	I <sub>SD</sub>	V <sub>EN</sub> =0V	-	1	10	uA
Oscillation Frequency	F <sub>OSC</sub>	SW pin	400	500	600	KHz
Sense Voltage	V <sub>SENSE</sub>		0.05	0.06	0.07	V
Soft Start Current	I <sub>SS</sub>	V <sub>SS</sub> =0V	-	8	-	uA
EN Pin Logic input threshold voltage	V <sub>SH</sub>	High (regulator ON)	2.0	-	-	V
	V <sub>SL</sub>	Low (regulator OFF)	-	-	0.8	
EN Pin Input Current	I <sub>SH</sub>	V <sub>EN</sub> =2.5V (ON)	-	20	-	uA
	I <sub>SL</sub>	V <sub>EN</sub> =0.3V (OFF)	-	-1	-	
LX Rise Time	T <sub>LXR</sub>	C <sub>LX</sub> =1000pF	-	60	-	nS
LX Fall Time	T <sub>LXF</sub>	C <sub>LX</sub> =1000pF	-	60	-	
Efficiency	EFFI	V <sub>CC</sub> = 5V, V <sub>OUT</sub> = 12V   I <sub>OUT</sub> = 1A	-	91	-	%
Maximum Duty Cycle	DC <sub>MAX</sub>	V <sub>FB</sub> =0V	-	85	-	%
Minimum Duty Cycle	DC <sub>MIN</sub>	V <sub>FB</sub> =1.5V	-	0	-	
Thermal shutdown Temp	T <sub>SD</sub>		-	145	-	°C

❖ **APPLICATION CIRCUIT**

$$V_{OUT} = V_{FB} \times \left(1 + \frac{R1}{R2}\right), V_{FB} = 1.0V, R2 = 1K \sim 3K$$

C4 capacitor ESR suggest 30m~100mΩ

❖ **FUNCTION DESCRIPTIONS**

**PWM Control**

The AX5302 is high efficient PWM step-up controller. In controllers of the AX5302, the pulse width varies in a range from 0 to 85%, according to the load current. The ripple voltage produced by the switching can easily be removed through a filter because the switching frequency remains constant. Therefore, AX5302 provide a low-ripple power over broad ranges of input voltage and load current.

**Setting the Output Voltage**

Application circuit item shows the basic application circuit with AX5302 adjustable output version. The external resistor sets the output voltage according to the following equation:

$$V_{OUT} = 1.0V \times \left( 1 + \frac{R1}{R2} \right)$$

Table 1 Resistor select for output voltage setting

V <sub>OUT</sub>	R2	R1
12V	1K	11K
15V	1.5K	21K
18V	1K	17K
24V	1.3K	30K

**Current Limiting Setting**

The current limit threshold is setting by the external resistor (R<sub>SENSE</sub>) connecting from SENSE pin to GND (refer the application circuit). The internal current limit compared voltage is 60mV. When the SENSE voltage is larger than 60mV, an over-current condition is triggered. Please refer to the formula for setting the minimum current limit value:

$$I_{SW(MAX)} = \frac{60m}{R_{SENSE}}$$

Note: I<sub>SW (MAX)</sub> is the maximum N-MOSFET current.

### Inductor Selection

For most designs, Low inductance values are physically smaller but require faster switching, which results in some efficiency loss. The inductor value can be derived from the following equation:

$$L = \frac{V_{IN} \times (V_{OUT} - V_{IN})}{V_{OUT} \times \Delta I_L \times f_{LX}}$$

Where is inductor Ripple Current. Large value inductors lower ripple current and small value inductors result in high ripple currents. Choose inductor ripple current approximately 15% of the maximum input current 3A,  $\Delta I_L=0.45A$ .

Table 2 Inductor select for output voltage setting ( $V_{CC}=5V$ )

$V_{OUT}$	9V	12V	15V	18V
<b>L1 Value</b>	18uH	15uH	10uH	10uH

The DC current rating of the inductor should be at least equal to the maximum load current plus half the ripple current to prevent core saturation ( $3A+0.25A$ ).

### Input Capacitor Selection

The input capacitor reduces the surge current drawn from the input and switching noise from the device. The input capacitor impedance at the switching frequency shall be less than input source impedance to prevent high frequency switching current passing to the input. A low ESR input capacitor sized for maximum RMS current must be used.

The capacitor voltage rating should be at least 1.5 times greater than the input voltage, and often much higher voltage ratings are needed to satisfy.

## Output Capacitor Selection

The output capacitor is required to keep the output voltage ripple small and to ensure regulation loop stability. The output capacitor must have low impedance at the switching frequency. A low ESR capacitor sized for maximum RMS current must be used. The low ESR requirements needed for low output ripple voltage.

The capacitor voltage rating should be at least 1.5 times greater than the input voltage, and often much higher voltage ratings are needed to satisfy.

The ESR range of output capacitor is 30m~100mΩ at switch current more than 1.5A. Add a 4.7uF output bypass capacitor in order to reduce output ripple effectively.

## Layout Guidance

When laying out the PC board, the following suggestions should be taken to ensure proper operation of the AX5302. These items are also illustrated graphically in below.

1. The power traces, including the NMOS Drain & Source trace, the inductor and the C1 trace should be kept short, direct and wide to allow large current flow.
2. The ground area for  $R_{SENSE}$  and C1 must be closed and C2 closed VCC pin of AX5302 to get good stability.
3. Keep the switching node, away from the sensitive FB node.
4. Do not trace signal line under inductor.

❖ TYPICAL CHARACTERISTICS

Power-ON Wave  
(V<sub>CC</sub>=5V, V<sub>OUT</sub>=12V, Load=0.7A, SS=0.1uF)

Enable-ON Wave  
(V<sub>CC</sub>=5V, V<sub>OUT</sub>=12V, Load=0.7A, SS=0.1uF)
