TMC

Thermomagnetic circuit breaker for mounting on a DIN rail

Data sheet
100695_en_03

© PHOENIX CONTACT 2012-03-09

1 Description

Single or multi-position thermomagnetic circuit breaker with lever actuation, DIN rail mounting, trip-free mechanism that cannot be influenced, various characteristic curves, all-pole tripping.

The circuit breakers meet the requirements of circuit breaker standard EN 60934 (IEC 60934): S-type, TM.

Typical areas of application are telecommunications systems, power supply units, industrial switchgear and control systems, and rail vehicles.

The ideal characteristic curve shown here illustrates the curve of the thermomagnetic trigger characteristic. The time-delayed tripping protects the thermal part of the characteristic curve against overload. The magnetic part of the circuit breaker responds without delay to high overload and short-circuit currents and trips within a few milliseconds.

4 Backup fuse

NOTE: Use a backup fuse in combination with the circuit breaker if the maximum switching current can be exceeded in the event of an error.

The table lists the maximum switching current, the relevant internal resistance, and the resulting backup fuse.

Nominal current	NH backup fuse	Internal resistance		Switching capacity according to EN 60934
		F1 (fast-blow) for DC	M1 (medium-blow) for DC/AC	
0.2 A	Any	39.3 Ω	26.1 Ω	400 A
0.3 A	Any	17.5 Ω	11.6 Ω	400 A
0.4 A	Any	9.2 Ω	6.6 Ω	400 A
0.5 A	Any	6.8 Ω	4.1 Ω	400 A
0.6 A	Any	4.2 Ω	3 Ω	400 A
0.8 A	Any	2.8 Ω	1.65 Ω	400 A
1 A	Any	1.6 Ω	1.10 Ω	400 A
1.5 A	25 A	0.78 Ω	0.47 Ω	400 A
2 A	25 A	0.42 Ω	0.28 Ω	400 A
2.5 A	25 A	0.26 Ω	0.183 Ω	400 A
3 A	25 A	0.18 Ω	0.124 Ω	400 A
4 A	25 A	0.12 Ω	0.077 Ω	400 A
5 A	25 A	0.092 Ω	0.063 Ω	400 A
6 A	50 A	0.054 Ω	0.045 Ω	800 A
8 A	50 A	0.025 Ω	≤ 0.02 Ω	800 A
10 A	50 A	0.022 Ω	≤ 0.02 Ω	800 A
12 A	50 A	≤ 0.02 Ω	≤ 0.02 Ω	800 A
16 A	50 A	≤ 0.02 Ω	≤ 0.02 Ω	800 A

5 Trigger characteristics

The thermomagnetic circuit breaker is available in 18 nominal current levels and in single and multi-pos. versions.

The version with the "medium-blow (M1)" trigger characteristic is suitable for AC and DC applications. The "fast-blow (F1)" characteristic version is suitable for DC applications.

The characteristic curves (see page 7) depend on the ambient temperatures. To avoid early or late disconnection, the circuit breaker nominal current must be multiplied by a factor.

Ambient temperature	Multiplication factor
-30°C	0.76
-20°C	0.79
-10°C	0.83
0°C	0.88
10°C	0.93
20°C	1
30°C	1.04
40°C	1.11
50°C	1.19
60°C	1.29

The characteristic curves (see page 7) are also valid for multi-position devices if all positions have an equal load. For multi-position devices and only 1-pos. overload, the thermal tripping limit changes for characteristic curves F1 and M1 to a maximum of $1.7 \times I_N$.

For DC, the magnetic operate values of the curves are around factor 1.3 higher.

Tripping is supported even with high-energy current peaks < 0.003 s.

NOTE: When mounting several circuit breakers in rows, observe the mutual warming effect. When the circuit breakers are loaded simultaneously, a mutual warming effect occurs, which has the same effect as an increase in ambient temperature.

In this case, the nominal current can only be led to 80%. Alternatively, the load current can be increased by a multiplication factor and the circuit breaker dimensioned accordingly.

5.1 Medium-blow (M1): Nominal value 0.2 A ... 6 A

- Lower tripping limit: $1.05 \times I_N$
- Upper tripping limit: $1.4 \times I_N$

- Lower tripping limit: $1.05 \times I_N$

5.2 Medium-blow (M1): Nominal value 8 A ... 16 A

- Lower tripping limit: $1.05 \times I_N$
- Upper tripping limit: $1.4 \times I_N$

5.3 Fast-blow (F1): Nominal value 0.2 A ... 16 A

Only for DC applications.
