BUFFER/CLOCK DRIVER

ICSLV810

Description

The ICSLV810 is a low skew 1.5 V to 2.5 V, 1:10 fanout buffer. This device is specifically designed for data communications clock management. The large fanout from a single input line reduces loading on the input clock. The TTL level outputs reduce noise levels on the part. Typical applications are clock and signal distribution.

Features

- Packaged in 20-pin QSOP/SSOP
- Split 1:10 fanout Buffer
- Maximum skew between outputs of different packages 0.75 ns
- Max propagation delay of 3.8 ns
- Operating voltage of 1.5 V to 2.5 V on Bank A
- Operating voltage of 1.5 V to 2.5 V on Banks B and C
- Advanced, low power, CMOS process
- Industrial temperature range -40° C to +85° C
- 3.3 V tolerant input when VDDA=2.5 V
- Available in Pb (lead) free packaging

NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01

External Components

The ICSLV810 requires a minimum number of external components for proper operation.

Decoupling Capacitors

Decoupling capacitors of 0.01 μ F must be connected between VDD and GND, as close to these pins as possible. For optimum device performance, the decoupling capacitors should be mounted on the component side of the PCB. Avoid the use of vias in the decoupling circuit.

Series Termination Resistor

When the PCB trace between the clock outputs and the loads are over 1 inch, series termination should be used. To series terminate a 50 Ω trace (a commonly used trace impedance) place a 33 Ω resistor in series with the clock line,

as close to the clock output pin as possible. The nominal impedance of the clock output is 20 Ω .

PCB Layout Recommendations

For optimum device performance and lowest output phase noise, the following guidelines should be observed.

- 1) The 0.01 μ F decoupling capacitors should be mounted on the component side of the board as close to the VDD pins as possible. No vias should be used between the decoupling capacitors and VDD pins. The PCB trace to VDD pin should be kept as short as possible, as should the PCB trace to the ground via.
- 2) To minimize EMI the 33 Ω series termination resistor, if needed, should be placed close to the clock output.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICSLV810. These ratings, which are standard values for ICS commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Revision History

Rev.	Originator	Date	Description of Change
A	P.Griffith	03/25/05	New device/datasheet.
B	P.Griffith	05/02/05	Released from Preliminary to final; changed Short Circuit Current parameter in 2.5 V DC Char table to ± 80 mA; changed Short Circuit Current parameter in 1.5 V DC Char table to ± 35 mA
C	P.Griffith	05/12/05	Added bullet in "Features" for operating voltage of 2.5 V on Bank A and specified that operating voltages of 1.5 and 2.5 V are on Banks B and C; changed block diagram input and pin 1 from IN to CLKIN; removed +1.5 V spec from pin 4 and pin 8 descriptions; added "VDDA + 1.2 V" to "All Inputs and Outputs" section of Absolute Maximum Ratings; added min and max values for Banks A, B, and C "Power Supply Voltage" in Recommended Operating Conditions; expanded DC Electrical Char tables in to include a separate table for Banks A, B, and C; expanded AC Electrical Char tables in to include a separate table for Banks A, B, and C;
D	P.Griffith	06/21/05	Added 209 mil 20-pin SSOP package and ordering info.
E	K. Beckmeyer	07/27/05	Specified operating voltage on Bank A from 1.5V to 2.5V; Added figures 4 and 5 on page 10 to explain Pulse Skew and Part-to-Part Skew; Changed Output Frequency Max Specification to 133MHz in AC Electrical Char tables for Banks A, B, and C; Added Duty Cycle Spec for VDD = 1.5V in AC Electrical Char tables for Banks A, B, C; Changed CLK conditions in DC Electrical Char tables on Banks B and C; removed SOIC package.
F	K. Beckmeyer	10/13/05	Added "LF" packaging and ordering info to both "R" and "F" packages.
G		12/17/09	Added EOL note for non-gren parts.
