DUAL 1 TO 8 BUFFALO™ CLOCK DRIVER

MK74CB218B

Description

The MK74CB218B Buffalo™ is a monolithic CMOS high speed clock driver. It consists of two identical single input to eight low-skew output, non-inverting clock drivers. This eliminates concerns of part to part matching in many systems. The MK74CB218B is packaged in the tiny 28-pin SSOP, which uses the same board space as the narrow 16-pin SOIC. The inputs can be connected together for a 1 to 16 fanout buffer.

A quad 1 to 4, and PECL versions, are also available. Consult IDT for more details.

The MK74CB218B can also act as a voltage translator, since it is possible to run the inputs at 3.3 V and the outputs at 2.5 V.

Features

- Packaged as 28-pin SSOP (150 mil body)
- Available in Pb (lead) free package
- Dual one input to eight output clock drivers
- Outputs are skew matched to within 250 ps
- A outputs and B outputs matched to 250 ps
- 2.5 V or 3.3 V output voltages
- Output Enable tri-states each bank of eight
- Clock speeds up to 200 MHz

NOTE: EOL for non-green parts to occur on 5/13/10 per PDN U-09-01

Family of IDT Parts

The MK74CB218B Buffalo™ is designed to be used with IDT's clock synthesizer devices. The inputs of the Buffalo are matched to the outputs of IDT clock synthesizers. Consult IDT for applications support.

Suggested Layout

NOTE: 33 ohm series termination resistors for each output are essential for operation.

For simplicity, series termination resistors are not shown for the outputs, but should be placed as close to the device as possible. It is most critical to have the 0.01 µF decoupling capacitors closest.

(B) = connect to VDDB

(V) = connect to VDD

(G) = connect to low inductance ground plane

Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	INA	Input	Clock input for eight A outputs.
2, 3, 4	QA0, QA1, QA2	Output	Clock A outputs.
5, 6	VDDA	Power	Power supply for QA outputs. Connect to a voltage from 2.5 V to VDD. Cannot exceed VDD.
7, 8	QA3, QA4	Output	Clock A outputs.
9, 10	GND	Power	Connect to ground.
11, 12, 13	QA5, QA6, QA7	Output	Clock A outputs.
14	OE	Input	Output Enable. Tri-states all clock outputs when this input is low. Internal pull-up to VDD.
15	VDD	Power	Power supply for inputs.
16, 17, 18	QB7, QB6, QB5	Output	Clock B outputs.
19, 20	GND	Power	Connect to ground.
21, 22	QB4, QB3	Output	Clock B outputs.
23, 24	VDDB	Power	Power supply for QB outputs. Connect to a voltage from 2.5 V to VDD. Cannot exceed VDD.
25, 26, 27	QB2, QB1, QB0	Output	Clock B outputs.
28	INB	Input	Clock input for eight B outputs.

Maximum Speed

The maximum speed at which the chip can operate is limited by the power dissipation in the package. Graph 1 shows the operating frequency plotted against load capacitance per pin for a die temperature of 125°C. This is at $V_{DD} = V_{DDA} = V_{DDB} = 3.3\text{ V}$, 70°C and with 33Ω series termination resistors. The termination resistors are essential because they allow a large proportion of the total power dissipated outside the package. Reducing or eliminating the series termination will cause an increase in die temperature. It is not recommended to operate the chip at die temperatures greater than 125°C. Also note that the load capacitance per pin must include PC board parasitics such as trace capacitance.

If not all outputs of the chip are used, it is possible to operate the chip faster with larger loads. Consult IDT for your specific requirement.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the MK74CB218B. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.

Item	Rating
Supply Voltage, VDD (referenced to GND)	5.2 V
All Inputs and Outputs (referenced to GND)	-0.5 V to VDD+0.5 V
Ambient Operating Temperature	0 to +70° C
Storage Temperature	-65° C to 150° C
Soldering Temperature	260° C (max. of 20 seconds)
