## Read Statement

1. The datasheets and other product information on the site are all from network reference or other public materials, and the copyright belongs to the original author and original published source. If readers and copyright owners have any objections, please contact us and we will deal with it in a timely manner.
2. The Chinese datasheets provided on the website is a Chinese translation of the English datasheets. Its purpose is for reader's learning exchange only and do not involve commercial purposes. The translation cannot be automatically updated with the original manuscript, and there may also be improper translations. Readers are advised to use the English manuscript as a reference for more accurate information.
3. All product information provided on the website refer to solutions from manufacturers' technical support or users the contents may have differences in description, and readers are advised to take the original article as the standard.
4. If you have any questions, please contact us at marketing@iczoom.com and mark the subject with "Datasheets" .

# High Temperature Analog Multiplexers

## 16-Channel Single-Ended / 8-Channel Differential

### HT506 / HT507

---

The High Temperature HT506/HT507 monolithic multiplexers consist of sixteen analog switches, 4-bit decode for channel selection, reference for logic switching thresholds, and enable pin for device deactivation where applications require. These multiplexers are fabricated with Honeywell's dielectrically isolated latch-up free high temperature (HTMOS™) linear process. Performance is specified over the full -55 to +225°C temperature range. Typically, parts will operate up to +300°C for a year, with derated performance. All parts are burned in at 250°C. The input buffers are designed to operate from either TTL or CMOS levels while providing a break-before-make action. The HT506 switches one of the sixteen single-ended inputs to a common output, while the HT507 switches one of the eight differential inputs to a differential output. These parts are available in standard pinout 28-pin DIP Ceramic Packages.

#### Applications

- Down-Hole Oil, Gas, and Geothermal Well
- Avionics
- Turbine Engine Control
- Industrial Process Control
- Electric Power Conversion
- Heavy Duty Internal Combustion Engine

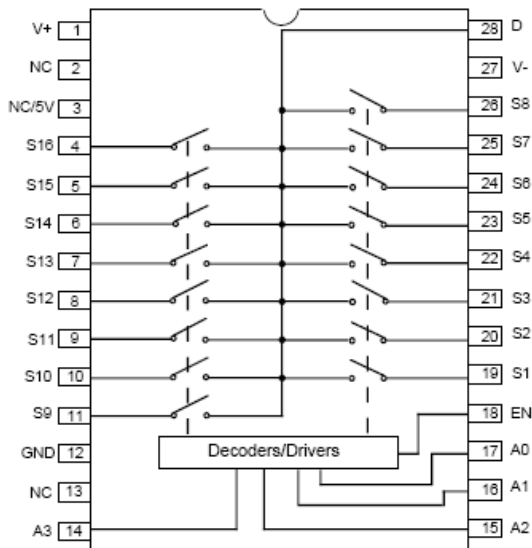

#### FEATURES AND BENEFITS

---

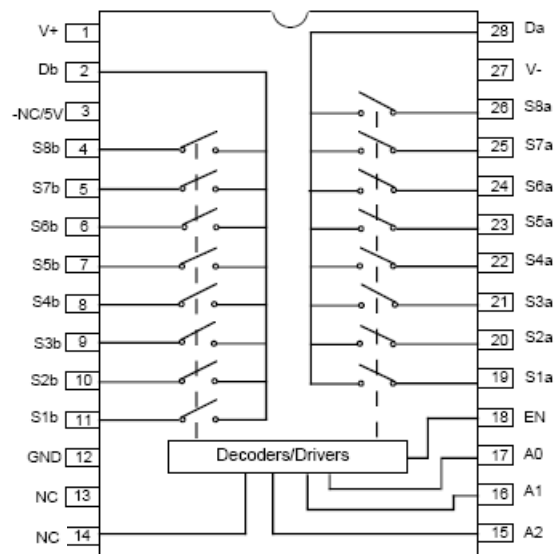

- ▶ Specified over -55 to +225°C
- ▶ 16:1 Single-Ended or 8:1 Differential Configuration
- ▶ No latch-up
- ▶ On resistance 400Ω at 225°C
- ▶ Output leakage less than 2.5μA at 225°C
- ▶ Designed to continuously operate for at least 5 years at 225°C
- ▶ Enable and address inputs compatible with TTL and/or 5V CMOS logic
- ▶ 10V analog input/output range (±5V or 0 to 10V)
- ▶ Split and single supply capability
- ▶ Break-Before-Make Switching

## PACKAGE PINOUTS

### PACKAGE PINOUT HT506
