| Note 5: For a power supply of $5 \mathrm{~V} \pm 10 \%$ the worst case on resistance ( $\mathrm{R}_{\mathrm{ON}}$ ) occurs for VHC at 4.5 V . Thus the 4.5 V values should be used when designing with this supply. Worst case $\mathrm{V}_{\mathrm{IH}}$ and $\mathrm{V}_{\mathrm{IL}}$ occur at $\mathrm{V}_{\mathrm{CC}}=5.5 \mathrm{~V}$ and 4.5 V respectively. (The $\mathrm{V}_{\mathrm{H}}$ value at 5.5 V is 3.85 V .) The worst case leakage current occurs for CMOS at the higher voltage and so the 5.5 V values should be used. <br> Note 6: At supply voltages ( $\mathrm{V}_{\mathrm{CC}}-\mathrm{GND}$ ) approaching 2 V the analog switch on resistance becomes extremely non-linear. Therefore it is recommended that these devices be used to transmit digital only when using these supply voltages. |  |  |  |  |  |  |  |

## AC Electrical Characteristics

$\mathrm{V}_{\mathrm{CC}}=2.0 \mathrm{~V}-6.0 \mathrm{~V} \mathrm{~V}_{\mathrm{EE}}=0 \mathrm{~V}-12 \mathrm{~V}, \mathrm{C}_{\mathrm{L}}=50 \mathrm{pF}$（unless otherwise specified）

FIGURE 11. Sinewave Distortion

## Typical Performance Characteristics

## Special Considerations

In certain applications the external load-resistor current may include both $\mathrm{V}_{\mathrm{CC}}$ and signal line components. To avoid drawing $\mathrm{V}_{\mathrm{CC}}$ current when switch current flows into the analog switch input pins, the voltage drop across the switch must not exceed 0.6 V (calculated from the ON Resistance).

Physical Dimensions inches（millimeters）unless otherwise noted

14-Lead Thin Shrink Small Outline Package (TSSOP), JEDEC MO-153, 4.4mm Wide Package Number MTC14

14-Lead Plastic Dual-In-Line Package (PDIP), JEDEC MS-001, 0.300" Wide Package Number N14A

Fairchild does not assume any responsibility for use of any circuitry described, no circuit patent licenses are implied and Fairchild reserves the right at any time without notice to change said circuitry and specifications.

## LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

1. Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
2. A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
