description

The SN752232 consists of dual ports, each containing three drivers and five receivers, which reduce board space and allow easy interconnection of the UART and two serial-port connectors of an IBM™ PC/AT™ and compatibles. The bipolar circuits and processing of this ‘‘dual GD75232” provide, a rugged, low-cost solution for this function.

The SN752232 complies with the requirements of the TIA/EIA-232-F and ITU V.28 standards. These standards are for data interchange between a host computer and a peripheral at signaling rates up to 20 kbit/s. The device supports data rates up to 120 kbit/s with lower capacitive loads (shorter cables). Interoperability at the higher signaling rates cannot be expected unless the designer has design control of the cable and the interface circuits at both ends. For interoperability at signaling rates up to 120 kbit/s, use of TIA/EIA-423-B (ITU V.10) and TIA/EIA-422-B (ITU V.11) standards is recommended.

The SN752232 is characterized for operation over the temperature range of 0°C to 70°C.

AVAILABLE OPTIONS

T_A	PACKAGED DEVICES	
	PLASTIC SHRINK SMALL OUTLINE (DL)	PLASTIC THIN SHRINK SMALL OUTLINE (DGG)
0°C to 70°C	SN752232DL	SN752232DGG

The DL package also is available taped and reeled. Add the suffix R to the device type (e.g., SN752232DLR). The DGG package is only available taped and reeled.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

Supply voltage (see Note 1): V_{CC}	10 V
V_{DD}	15 V
V_{SS}	–15 V
Input voltage range, V_I: Driver	–15 V to 7 V
Receiver	–30 V to 30 V
Driver output voltage range, V_O	–15 V to 15 V
Receiver low-level output current, I_{OL}	20 mA
Package thermal impedance, θ_{JA} (see Note 2): DGG package	70°C/W
DL package	63°C/W
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	260°C
Storage temperature range, T_{stg}	–65°C to 150°C

† Stresses beyond those listed under “absolute maximum ratings” may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under “recommended operating conditions” is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTES: 1. All voltages are with respect to network GND.
2. The package thermal impedance is calculated in accordance with JESD 51-7.

APPLICATION INFORMATION

Diodes placed in series with the V_{DD} and V_{SS} leads protect the SN752232 in the fault condition in which the device outputs are shorted to ±15 V, and the power supplies are at low and provide low-impedance paths to ground (see Figure 15).
