TYPE   Silicon Monolithic Integrated Circuit

Product Name   Sound Generator for Cellular Phone

Product No   BU8772KN

Physical Dimensions   Fig. 1 Mechanical dimension

Block Diagram   Fig. 2 Block diagram

Features
○16 harmonies generator available at the same time.
  128 sounds + drum set 47 sounds generation.
○FIFO buffer and sequencer reduce the burden of CPU.
○Integrated FIFO buffer for "Down load music data".
○Adjustable parameter for the generation of harmony.
○Selectable parameter of wave form (Square or special rectangle) to sound
○Stereo sound available.
○Integrated stereo sound DAC .
○Integrated 2-dimensional filter (Fc=20Khz)
○Power down mode supported.
○CPU control through integrated serial port.
○Q F N 2 8 V Package

□ This chip don't be designed to protect against the radioactivity.

Design	Check	Approval	Date 2002 Jan 15	Specification Rev. E
			ROHM CO.,LTD.	Specification No. TSZ02201-BU8772KN-1-2

● Block diagram
Figure 2.   Block Diagram

Description of circuit blocks

●Test block

This block includes IC testing circuits.

When the TEST [1:0] pin's state is "H, H", this block is in normal mode.

When it is in any another state, this block is in IC test mode.

●Serial interface block

This block includes interface circuits that interface with the system chip.

During a write operation, serial data synchronized with SCLK is received at the SI/O pin,

then it is converted to parallel data that is expanded in the WAVEreg block or SRAM block.

During a read operation, data from the WAVEreg block is converted to serial data

and is output from the SI/O pin in sync with SCLK.

●Clock gen block

This is the clock generator that supplies a clock to the sequencer block and WAVEgen block. Division parameters are generated to maintain a constant output frequency from each WAVEgen block's internal divider/counter to enable support for various master clocks (MCLK) as master clock signals supplied via the MCLK pin and divided into system clocks for the sequencer block, WAVEgen block, etc.

●SRAM (FIFO)

This buffer is used for sound source data.   It has an FIFO configuration.

The buffer's capacity is 512 byte.

The write point (WP) and read point (RP) are both hardware-controlled.

NearlyEmpty and NearlyFull are included as interrupt sources to prevent overflow

and underflow errors.

Both WP and RP can be reset and the FIFO memory devices can be emptied by writing "1" to the SequenceControlReg's Reset bit.

●Sequencer block

This block analyzes and converts message data.

When a melody is played, this block analyzes the RAM read data

and performs the settings required for the melody in the WAVEreg block to set the desired timing.

This block includes an assign function that dynamically assigns to the WAVEgen block.

●RAM interface block

This block controls the SRAM memory.

It generates and controls the write and read pointers that are used to configure the FIFO buffer.

●Timing gen block

This block controls the play timing.   It control the timing of access to the WAVEreg block.

Date 2002 Jan 15	Specification
ROHM CO.,LTD.	Specification No. TSZ02201-BU8772KN-1-2

● **WAVE registers**

These are the control registers for the WAVEgen block.

The sequencer controls the WAVEgen registers.

The control registers for the WAVEgen block cannot be accessed directly by the CPU.

However, common control of sound sources can be controlled directly by the CPU.

● **WAVEgen block**

This block sets generation of sound (melody) waveforms.

Up to 16 sounds can be generated at the same time.

Waveforms are generated according to the WAVEreg block's register setting data.

The 16 sound sources are generated from a tone palette of 128 voices plus a drum set.

Each sound source is controlled by a sequencer to reduce the CPU's processing load.

Equal temperament is used to produce a scale from A (110.34 Hz) to C8 (4173.983 Hz).

The equal temperament's standard pitch for A is based on a reference clock frequency of 440 Hz.

Pitch is proportionate to the MCLK frequency.

● **DAC**

This is stereo D/A converter.

The analog output level is increased to support the level generated by up to 16 WAVEgen registers.

The DAC block's dynamic range is 2/3 VDD (as a Vpp value).

The amplitude required for 16-tone synthesis should be set so as not to exceed this dynamic range.

● **LPF**

This is a secondary LPF (Low Pass Filter).

It is a smoothing filter that eliminates high-frequency components from analog waveforms generated by the DAC block.

The final analog waveform is output via the ANOUT pin.

The ANOUT pin's minimum load resistance is 100 [KΩ].

●Description of pin functions

Pin No.	Symbol	Description of function	Attribute	Circuit type	Remarks
24	TEST0	Input pin for IC tests Connect to Vdd	In	A	Used as Connect to Vdd
26	TEST1	Input pin for IC tests Connect to Vdd	In	A	Used as Connect to Vdd
9	SO	Data Out pin for serial interface Hi-Z,when SEL is High	Out	G	
10	SI/O	Data I/O pin for serial interface	In/Out	B	
12	SCLK	Clock input pin for serial interface	In	A	
13	SEL	Select input pin for serial interface (active low)	In	A	
23	MCLK	System clock input pin Can be set within range from 12 MHz to 20 MHz. Scale precision within this range is approximately 0.2%.	In	F

●Description of sequencer

This sequencer uses the timing information in the melody data to control the timing of sound sources.

To take full advantage of the sound sources, this sequence also has an assign function which dynamically assigns data to sound sources.

This function enables high-quality musical expressions.

[General operation]

1) Fetches melody data stored in FIFO directives and assigns them to empty sound sources.

2) Tones are generated when information from melody data is set to any WAVEgen setup register.

3) Controls tone generation, turns tone OFF at tone end timing, and releases the sound source.

4) Decide the order of priority that registers to Wave.gen in consideration of Track No, Voice No.

The following table shows a map of control registers in the WAVEgen block.

WAVEgen block control registers

Number	Reg Name	D7	D6	D5	D4	D3	D2	D1	D0
0	WAVE0gen Setup	SD7	SD6	SD5	SD4	SD3	SD2	SD1	SD0
1			MD6	MD5	MD4	MD3	MD2	MD1	MD0
2		TONEon	ENVtrg	LV5	LV4	LV3	LV2	LV1	LV0
3		MUTE	x	RV5	RV4	RV3	RV2	RV1	RV0

SD [7:0]	Tone data
MD [6:0]:	Scale data
LV [5:0]:	Left-channel volume data
RV [5:0]:	Right-channel volume data
TONEon	Tone ON/OFF control
ENVtrg	Envelope start trigger
MUTE	Mute sound sources

● Sound source control
　　　Overall control of sound sources is performed directly by the CPU.

1. Description of registers
　　　The common control register is controlled directly by the CPU.
　　　A map of its registers is shown below.

Map of Common Control Register for Sound sources

Address	Reg Name	R/W	Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
0x00	Common setup	W	x	SE	Ring		Pmode	AN1/2	Mono	TMute

0x10 0x7F	Reserved		Reserved							

Address 0x00 Common setup register
(Write)

Bit6: SE   SE Mode   'H' write operation.
The sequencer can use Wave.gen[8:15] only.
The other can be control from CPU directly.
'L' write operation
The sequencer can use Wave.gen[0:15].   (Default setting)

Bit5: Ring   Ringer Mode   'H' write operation.
Increase of output.
'L' write operation
Normally   (Default setting)

Bit4: Don't write 'H'.

Bit3: Pmode   Select Port Mode   "H" write operation sets serial port as "Mode2".
"L" write operation sets serial port as "Mode1".
(Default setting)

Bit2: AN1/2   Select data format "H" write operation sets input data format as "B".
"H" write operation sets ,when all Wave.gen are control from CPU directly.
"L" write operation sets input data format as "A".
(Default setting)

[For further description of formats, see the next section.]

Bit1: Mono   Monaural setting bit   "H" write operation sets output as monaural.
"L" write operation sets output as stereo.
(Default setting)

#When monaural mode, Monaural output is ANOUT(L).ANOUT(R) is mute.

Bit0: Tmute   Mute sound sources   "H" write operation sets mute for melody.
"L" write operation clears mute for melody.
(Default setting)

Address 0x01 Wave Vol register
(Write)

Bit[7:0]:VOL[7:0]   Total volume

Address 0x02 INT Mask register
(Write)

Bit7: INT Polarity   Interrupt output polarity
"H" write operation sets interrupt output signal enable 'H'.
"L" write operation sets interrupt output signal enable 'L'.
(Default setting)

Reset from only an input pin it assumed to be effective.
An influence is not received from address 0x04 bit[7] firm ware reset.

Bit4: LED Int enb   LED interrupt enable   "H" write operation sets LED interrupts as valid.
"L" write operation masks LED interrupts. (Default setting)

Date 2002 Jan 15	Specification
ROHM CO.,LTD.	Specification No. TSZ02201-BU8772KN-1-2

Address 0x03   Status   register
(Read)

Bit7:   Empty   FIFO Empty bit (interrupt source)
         "H" indicates that melody data FIFO is empty.

Bit6:   Nearly Empty   FIFO Nearly Empty bit (interrupt source)
         "H" indicates that remaining data in melody data
         FIFO has reached to the level set in the FIFO control register.

Bit5:   Nearly Full   FIFO Nearly Full bit (interrupt source)
         "H" indicates that remaining data in melody data
         FIFO has reached the level set in the FIFO control register.

Bit4:   LED   LED bit (interrupt source)
         "H" indicates that Voice0 sounds are generated in melody data.

Bit3:   Ill Format   Illegal format bit (interrupt source)
         "H" indicates that performance data format of halfway "Empty" it detects.
         "H" indicates that abnormal completion of a sequencer and the action from
         a transmission sequence is necessary.

Bit2:   Empty Area
         "H" indicates that a remainder melody data pointer exists in the area of Empty.

Bit1:   Full Area
         "H" indicates that a remainder melody data pointer exists in the area of Full.

Bit0:   BUSY   Busy bit
         "H" indicates that melody data output or sequencer operation is in progress.

(Write)

Bit7:   Empty Clear   FIFO Empty Clear bit
         Writing "1" clears the Empty bit.

Bit6:   Nearly Empty Clear   FIFO Nearly Empty Clear bit
         Writing "1" clears the Nearly Empty bit.
         Any interrupt signal is negated.

Bit5:   Nearly Full Clear   FIFO Nearly Full Clear bit
         Writing "1" clears the Nearly Full bit.
         Any interrupt signal is negated.

Bit4:   LED Clear   LED Clear bit
         Writing "1" clears the LED bit.
         Any interrupt signal is negated

Bit3:   Ill Format Clear   Illegal format Clear bit
         Writing "1" clears the Illegal format bit.

Address 0x04   Sequence Control   register
(Write)

Bit7:   Reset   Firmware reset   "H" write operation resets this sequencer.
         When end of performance, this bit sets.

Bit6:   Standby Standby mode   "H" write operation sets this IC to standby mode.
                                  "L" write operation releases standby mode.
         If this bit operation is executed during play mode, correct playback of the current song is
         not guaranteed.

Bit5:   Anout Dis   Anout Disable bit   "H" write operation sets Hi-z at Anout(L/R/Mono).
"L" write operation   become to output at Anout(L/R/Mono).
(Default setting)

If this bit operation is executed during play mode, correct playback of the current song is not guaranteed.

Bit4:   Anout Mono Dis   Anout Mono Disable bit   "H" write operation sets Hi-z at Anout(Mono).
"L" write operation   become to output at Anout(Mono).
(Default setting)

If this bit operation is executed during play mode, correct playback of the current song is not guaranteed.

Bit0:   Start   Sequencer start bit.   "H" write operation starts the sequencer.
"L" write operation stops the sequencer.

If this bit operation is executed during play mode, correct playback of the current song is not guaranteed.

Address   0x05   FIFO   Control   register
(Write)

Bit[7:4]   NearlyFullSetup
"1000" sets remaining space at 1/16 of FIFO capacity
"0100" sets remaining space at 1/8 of FIFO capacity (default setting).
"0010" sets remaining space at 1/4 of FIFO capacity.
"0001" sets remaining space at 1/2 of FIFO capacity.
Others- Don't Use！！

Bit[3:0]   NearlyEmptySetup
"1000" sets remaining data at 1/16 of FIFO capacity
"0100" sets remaining data at 1/8 of FIFO capacity (default setting).
"0010" sets remaining data at 1/4 of FIFO capacity.
"0001" sets remaining data at 1/2 of FIFO capacity.
Others- Don't Use！！

Address   0x06   FIFO   Window   register
(Write)

Bit[7:0]   FIFO   Window   Melody data FIFO window
Writing to this register fills the FIFO.

2. Melody data format

The CPU indicates the format of the data stored in RAM (FIFO).

Select from either of two data formats.

Select whether to use AN1 or AN2 bit.

[Format A]

Note message format (7 bytes)

Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
Delta Time							
Track Number 0~255							
Voice Number		Key[5:0]					
Tone (Expansion code *Length of 6 Byte)							
	Key[6]	L-Volume					
Mute	Extension	R-Volume					
Length of sound [Delta Time]							

[Format B]

Note on message format (6 bytes)

Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
Delta Time							
Track Number						Voice Number	
ToneON/Off		Key[6:0]					
Tone (Expansion code)							
		L-Volume					
Mute		R-Volume					

Note off message format (3 bytes)

Bit7	Bit6	Bit5	Bit4	Bit3	Bit2	Bit1	Bit0
Delta Time							
Track Number						Voice Number	
ToneON/Off		Key[6:0]					

Description of format

Delta Time	:	Each setting in the Δ time register is called 1 Δ time, which indicates the amount of time that has elapsed since the previous event.
Track Number	:	Indicates the sequence in which tracks are played (0, 1, 2, etc.)
Voice Number	:	Indicates voice number in current track
Key[6:0]	:	Indicates the key (scale) of sounds being generated
Sound length	:	Indicates the length of a generated sound. This is expressed as the Δ time. When sound length is 0xFF, it is based on the extension of the sound length being done in the rest, and pronunciation at this time is protected 【 any case 】, too.
Tone (Expansion code)	:	0x00~0xFC make to indicate the tone of the sound source : 0xFD~0xFF make an expansion code.

Expansion code is length of 6 byte.

[NOP Message]

	0xFD
+1Byte	0x00
+1Byte	0x00

[Δtime Message]

	0xFE
+1Byte	Δtime (U)
+1Byte	Δtime (L)

Setting in Δtime that was turned into be common in performance data. .
Accordingly, Track number and voice number disregarded.
The information of a performance data overall is made.
Integer9bit+decimal7bit, Total 16bit with unit [ms].
Range is 0.125 to 511[ms].

[TimeBase Message]

	0xFF
+1Byte	0x00
+1Byte	TimeBase

Whether each track is what times were shown with "Δtime message" is set up.
Accordingly, Track number disregarded and the information of each track number
 is made.
Sound length of Format A is controlled by this message.
Yet, only track0 to 15, "Time base" is handled as 110b in the track15 of after.
Appropriate sound length setting requires.

TimeBase[2:0]
000b = x64
001b = x32
010b = x16
011b = x8
100b = x4
101b = x2
110b = x1
other = Don't use !!

L-Volume : Volume of left channel
R-Volume : Volume of right channel
Mute : Mute setting
Tone On/Off : Tone ON/OFF control   1: Tone on
                                          0: Tone off

Extension : 0: NOP
1: It is shown that the extension of the sound length
   is done in the rest.
The control which is equal to the time
when sound head is 0xFF is done.

[Notes]

(1) Format A is the format in which the tone OFF status is calculated based on the sound length and control is performed in the sequencer.

Format B is the format in which the tone OFF status is calculated on the data generation side and control is performed using messages.

2. Standby general operation

Address0x4,Sequence control register bit[6];

"H" write operation sets this IC to standby mode.

When standby mode:

MCLK(input) is gated .

Analog block sleep .

All control register not move (without Sequence control register bit[6]).

Normal from standby mode:

Address0x4,Sequence control register bit[6];

"L" write operation sets this IC to normal mode from standby mode.

[Transition from the performance state to the suspension state]

step1   Address 0x4 write operation data 0x00 (Sequencer stop)
step2   Address 0x4 write operation data 0x40 (Standby mode set)

Forego procedure is necessary.

[Notice for using "formatB"]

At "formatB" unable to change volume during NOTEON.

When NOTEON message inputs for changing volume, BU8772KN asign onother wave generator.

Therefore several sounds are generated at same TrackNo and Key. So, without NOTEOFF message for them,

The wave generator ever NOTEON.

When translates to "formatB", don't input to BU8772KN data for changing volume, or input them as NOP

Message.

[Notice for using "formatA"]

When same TrackNo,VoiceNo and Key data is already NOTEON, BU8772KN treat next data as extention

for length of sound.

When translates to "formatA", set other TrackNo(VoiceNo) for each tone data, or set other Key for each

tone data of same TrackNo,VoiceNo. Especially, notice for specific effect sounds.

4. Tone data table

The tone data table is shown below.

These correspond to the tones in the melody data format.

SD[7:0]	Instrument	SD[7:0]	Instrument	SD[7:0]	Instrument
0x00	Acoustic Grand Piano	0x30	String Ensembles 1	0x60	FX1(rain)

Note: The following assignments set Compact MIDI format compatibility for the above tones.

Tone bank 2 & tone data 0 to 63 are assigned to 0x00 to 0x3F in SD [7:0].

Tone bank 3 & tone data 0 to 63 are assigned to 0x40 to 0x7F in SD [7:0].

Tone bank 52 & tone data 0 to 31 are assigned to 0xAF to 0xCE in SD [7:0].

Tone bank 62 & tone data 0 & Key date 0 to 46 are assigned to 0x80 to 0xAE in SD [7:0].

5. KEY date (K E Y)

The KEY data table is shown below.

These correspond to the KEY in the melody data format.

Key[6:0]	Real KEY	Remarks*MIDI	Remark*Compact MIDI

5. Synchronous melody LED control

LEDOUT is asserted when the performance date of a main melody tone on.

It is negated when writing "1" clears the LED bit.

In this IC, a main melody is fixation Voice0 of Track0.
LED lighting time

LEDOUT

At tone on Voice0 in Trac0,
LEDOUT is asserting

Writing "1" to address 0x03 bit[4] LED Clear.
Any LEDOUT signal is negated.

The firmware can recognize LEDOUT output by LED interrupt.
The firmware can be control LED lighting time until interrupt clear.

By carrying out this control, it enables LED lighting synchronous melody.

Compact MIDI format processing flow example
Making AN1/2' L' address 0x00: bit [2] a performance data format selects the format A.
Case of TrackNo0～15.

Start

Temp of all trucks is common. ── No

Yes

The value of a time base is all b0xxx. ── No

The editing in a gate time is necessary.

The value of a time base is all b1xxx. ── No

The editing in a gate time is unnecessary. Yes

Yes

A

The data of C-MIDI is transformed to performance data of this IC

The message each of a track is analyzed. It changes to a performance data format.

A tempo message of C-MIDI each Track from (60*1000)/(Temp*Time Base (value b' x110) is calculated.

It transforms it to integer 9bit, minority 7bit.

This value is made the value of performance data of an expansion cord 0xFE (Δ time message).

From now on, this IC makes this value the standard of Delta Time.

The value of the performance data that made a cord 0xFF (Time Base message) that expands subordinate position 3bit of Time Base of C-MIDI each Track, is made.

From now on, this IC makes the value that calculated it with 1DeltaTime that set up this value and the above the standard of Gate Time.

The unification of the standard of Delta Time.

It calculates on the basis of 1Δ time that carried out Delta Time inside the message of C-MIDI each Track with processing the front.

Track is developed.

An axis is made for one hour while developing each Track. Delta Time within each message is calculated.

Delta Time inside a message exceeds 8bit. ── No

Yes

Delta Time adjustment of a performance data format

An expansion cord 0xFD (NOP message) is inserted to an appropriate place of performance data to become the same time as original Delta Time.

Delta Time adjustment of a performance data format.

END

| Date 2002 Jan 15 | Specification |
| ROHM CO.,LTD. | Specification No. TSZ02201-BU8772KN-1-2 |

After Truck16, And temp and Time Base are not common.

A

The data of C-MIDI is transformed to performance data of this IC

The message each of a track is analyzed. It changes to a performance data format.

A tempo message of C-MIDI each Track from (60*1000)/(Temp*Time Base (value b' x110)) is calculated

It transforms it to integer 9bit, minority 7bit.

G C M of delta time integer 9bit, minority 7bit (a unit (ms)) to it transforms it

This value is made the value of performance data of an expansion cord 0xFE (Δ time message).

From now on, this IC makes this value the standard of Delta Time and Gate time.

0xFF (Time Base message) of an expansion cord is set up to fixation value of' b110.

The unification of the standard of Delta Time.

It calculates on the basis of 1Δ time that carried out Delta Time inside the message of C-MIDI each Track with processing the front.

It calculates on the basis of 1Δ time that carried out Gate Time inside the message of C-MIDI each Track with processing the front.

Track is developed.

An axis is made for one hour while developing each Track.

Delta Time within each message is calculated.

Delta Time inside a message exceeds 8bit → No

Yes

Delta Time adjustment of a performance data format

An expansion cord 0xFD (NOP message) is inserted to an appropriate place of performance data to become the same time as original Delta Time.

Delta Time adjustment of a performance data format.

```

[memo]
   Performance data is processed every format block.
   If Bu8772 detects empty of FIFO with a block each exception actually.
   Sequencer stop, Performance discontinuation, sets 0x03bit[3] illegal format.
   It must carry out setting after Firm Ware reset 0x03bit[3].
   It is Clear of FIFO. And The sequencer prepares restart.
   Accordingly, it's desirable to transmit every a format block.

For example
To play Drum set of Compact MIDI.
NOTICE

1. BU8772KN don't always generates identical sound volumes every TONEON with following specific
   effect sounds.   Don't use them for playing repeatedly with request relative volume.   [ ] indicates VoiceNo.
   Up[182], Down[183], Robot [188], Bubble[205]

2. When TONEOFF after short play time, the noise seems to adds to release sounds with following specific
   effect sounds.   This is caused by keeping waves at TONEOFF.   But, it is true that the release sounds
   different from the original sounds.   These conditions are following.   [ ] indicates VoiceNo.
   (1) play time more than 1000ms is desirable
       LongGuiro[167], Beep(normal)[177], PowerUp[180], Up[182], Down[183], Bomb(short)[195],
       Robot damage [198]
   (2) play time more than 500ms is desirable
       Beep(Outer space)[178], Character get[181], Luffin' [184], Mystery[187], Character jump[191],
       Laser gun (Short) [192], Hit 2 (Noise) [194], Character fade out[199], Bubble[205], Drop[206]
   (3) play time more than 150ms is desirable
       specific effect sounds without forego sounds

3. Notice for using ANOUT(L) as monaural
   The noise level of ANOUT(L) and ANOUT(MONO) get high when Address0x00,common setup register,Bit1
   (MONO) is 'H'. We recommend the following methods when ANOUT(L) uses at monaural.
   (1)   Address0x00,common setup register,Bit1 write 'L'. (Stereo mode)
   (2)   Input right and left volumes to BU8772KN as monaural. (Level L-volume and R-volume)

< Specifications (Precautions and Prohibitions) >

● **Safety Precautions**

1) The products are designed and produced for application in ordinary electronic equipment (AV equipment, OA equipment, telecommunication equipment, home appliances, amusement equipment, etc.).
If the products are to be used in devices requiring extremely high reliability (medical equipment, transport equipment, aircraft/spacecraft, nuclear power controllers, fuel controllers, car equipment including car accessories, safety devices, etc.) and whose malfunction or operational error may endanger human life and sufficient fail-safe measures, please consult with the Company's sales staff in advance. If product malfunctions may result in serious damage, including that to human life, sufficient fail-safe measures must be taken, including the following:

   [a] Installation of protection circuits or other protective devices to improve system safety
   [b] Installation of redundant circuits in the case of single-circuit failure

2) The products are designed for use in a standard environment and not in any special environments.
Application of the products in a special environment can deteriorate product performance. Accordingly, verification and confirmation of product performance, prior to use, is recommended if used under the following conditions:
   [a] Use in various types of liquid, including water, oils, chemicals, and organic solvents
   [b] Use outdoors where the products are exposed to direct sunlight, or in dusty places
   [c] Use in places where the products are exposed to sea winds or corrosive gases, including
       Cl_2, H_2S, NH_3, SO_2, and NO_2
   [d] Use in places where the products are exposed to static electricity or electromagnetic waves
   [e] Use in proximity to heat-producing components, plastic cords, or other flammable items
   [f] Use involving sealing or coating the products with resin or other coating materials
   [g] Use involving unclean solder or use of water or water-soluble cleaning agents for cleaning after
       soldering
   [h] Use of the products in places subject to dew condensation

3) The products are not radiation resistant.

4) The Company is not responsible for any problems resulting from use of the products under conditions not recommended herein.

5) The Company should be notified of any product safety issues. Moreover, product safety issues should be periodically monitored by the customer.

● **Precautions Regarding Application Examples and External Circuits**

1) If change is made to the constant of an external circuit, allow a sufficient margin due to variations of the characteristics of the products and external components, including transient characteristics, as well as static characteristics. Please be informed that the Company has not conducted investigations on whether or not particular changes in the application examples or external circuits would result in the infringement of patent rights of a third party

2) The application examples, their constants, and other types of information contained herein are applicable only when the products are used in accordance with standard methods. Therefore, if mass production is intended, sufficient consideration to external conditions must be made.

< Specifications (Precautions and Prohibitions) >

● **Precautions Regarding Foreign Exchange and Foreign Trade Control Law**

1) The Company has not determined whether or not the products are considered "a controlled product or technology " as specified in the Foreign Exchange and Foreign Trade Control Law.
Accordingly, if exportation of the products, either separately or integrated in another company's products, is intended, or giving the products to persons who are not residents is planed, additional steps are required, based upon the appropriate regulations.

● **Prohibitions Regarding Industrial Property**

1) These Specifications contain information related to the Company's industrial property.   Any use of them other than pertaining to the usage of appropriate products is not permitted.   Duplication of these Specifications and its disclosure to a third party without the Company's permission is prohibited.

2) Information and data on products, including application examples, contained in these specifications are simply for reference; the Company does not guarantee any industrial property rights, intellectual property rights, or any other rights of a third party regarding this information or data.   Accordingly, the Company does not bear any responsibility for:
   [a] infringement of the intellectual property rights of a third party
   [b] any problems incurred by the use of the products listed herein.

3) The Company prohibits the purchaser of its products to exercise or use the intellectual property rights, industrial property rights, or any other rights that either belong to or are controlled by the Company, other than the right to use, sell, or dispose of the products.

● **Precautions on Use of Products**

1) Verification and confirmation of performance characteristics of products, after on-board mounting, is advised.

2) In particular, if a transient load (a large amount of load applied in a short period of time, such as pulse) is applied, confirmation of performance characteristics after on-board mounting is strongly recommended. Avoid applying power exceeding normal rated power; exceeding the power rating under steady-state loading condition may negatively affect product performance and reliability.

3) When a highly active halogenous (chlorine, bromine, etc.) flux is used, the remainder of flux may negatively affect product performance and reliability.

4) In principle, the reflow soldering method must be used for surface mount device ; if flow soldering method is preferred, please consult with the Company in advance.

● **Precautions Regarding Product Storage**

1) Product performance and soldered connections may deteriorate if the products are stored in the following places:
   [a] Where the products are exposed to sea winds or corrosive gases, including Cl_2, H_2S, NH_3, SO_2, and NO_2
   [b] Where the temperature or humidity exceeds those recommended by the Company

2) The guaranteed period of solder connections and product performance is within one year from shipment by the Company, provided that the above-mentioned storage conditions have been satisfied.

● **Other Matters**

1) Please sign these Specifications and return one copy to the Company.
   If a copy is not returned within three months after the issued date specified on the front page of these Specifications, the Company will consider the Specifications accepted.
2) If any matter related to these Specifications needs to be clarified, discussions shall be held promptly between the two parties concerned to determine the issue.
