Read Statement

1. The datasheets and other product information on the site are all from network reference or other public materials, and the copyright belongs to the original author and original published source. If readers and copyright owners have any objections, please contact us and we will deal with it in a timely manner.

2. The Chinese datasheets provided on the website is a Chinese translation of the English datasheets. Its purpose is for reader's learning exchange only and do not involve commercial purposes. The translation cannot be automatically updated with the original manuscript, and there may also be improper translations. Readers are advised to use the English manuscript as a reference for more accurate information.

3. All product information provided on the website refer to solutions from manufacturers' technical support or users the contents may have differences in description, and readers are advised to take the original article as the standard.

4. If you have any questions, please contact us at marketing@iczoom.com and mark the subject with "Datasheets".

SOCRATES-16Bis

SDC-16i, PEF 24625 E

SDFE-4, PEF 24624 E

The SOCRATES-16Bis is a member of Infineon's 2nd generation SOCRATES™ family of SHDSL transceivers and is designed for high-density DSLAM and DLC applications.

Featuring full compliance with the ETSI TS 101524 and the ITU G.991.2 (G.SHDSL/G.SHDSL.bis) standards, SOCRATES-16Bis is a comprehensive and flexible five member chip set.

New 16-channel system functionality and cost saving features continue to provide significant low BOM advantages in the SOCRATES tradition.

Combining an unprecedented power consumption of only 550 mW per channel, together with a very small footprint, the SOCRATES-16Bis now makes very high density linecards a reality.

SOCRATES-16Bis extends Infineon's custom-tailored line of telecommunication ICs, and provides a wide range of narrow and broadband access solutions.

Applications

- DSLAMs (IP/ATM)
- DLC
- MSAP
- CO line cards
- Remote DSLAM/DLC uplink
- EFM (Ethernet First Mile) Equipment

General Features

- 16-channel chip set consists of a single SDC-16i (Symmetric DSL Controller) and four SDFE-4s (Symmetric DSL Front End)
- Only external passive components required
- Only 3.3 V and 1.8 V power supplies required
- Supports all symmetric DSL protocols, including advanced SHDSL up to 6 Mbit/s, Packet TC, and M-pair mode (G.SHDSL.bis)
- Supports ATM, Ethernet/Packet, and TDM backplanes

- Various channel bundling technologies for ATM, TDM, Ethernet and Packet-based applications such as IMA
- Programmable channel bundling and transceiver via a single API and micro controller interface

PHY Features

- The SDFE-4 is a fully integrated four-channel SHDSL transceiver
- Completely integrated transceiver includes the DSP, micro controller, AFE, line driver, and memory
- Tunable hybrid for optimal loop adaptation and reach
- Flexible TDM interface

TC Features

- SDC-16i offers various interfaces and bundling technologies
- Provides UTOPIA, POS PHY, MII, and 16 TDM interfaces
- 8 kbit/s payload granularity for unstructured leased line over ATM
- AAL5 block provides UTOPIA/ Packet modem interoperability
- Supports ATM and Packet TC layer
- No external RAM or controller required for channel bundling

Power Consumption

- Power Consumption is 550 mW per channel at full speed, including IMA

Attention please!
The information herein is given to describe certain components and shall not be considered as a guarantee of characteristics.

Terms of delivery and rights to technical change reserved.

We hereby disclaim any and all warranties, including but not limited to warranties of non-infringement, regarding circuits, descriptions and charts stated herein.

Information
For further information on technology, delivery terms and conditions and prices please contact your nearest Infineon Technologies Office.

Warnings
Due to technical requirements components may contain dangerous substances. For information on the types in question please contact your nearest Infineon Technologies Office.

Infineon Technologies Components may only be used in life-support devices or systems with the express written approval of Infineon Technologies, if a failure of such components can reasonably be expected to cause the failure of that life-support device or system, or to affect the safety or effectiveness of that device or system. Life support devices or systems are intended to be implanted in the human body, or to support and/or maintain and/or sustain and/or protect human life. If they fail, it is reasonable to assume that the health of the user or other persons may be endangered.
