NB4N11S

3.3 V 1:2 AnyLevel™ Input to LVDS Fanout Buffer / Translator

The NB4N11S is a differential 1:2 Clock or Data Receiver and will accept AnyLevel™ input signals: LVPECL, CML, LVCMOS, LVTTTL, or LVDS. These signals will be translated to LVDS and two identical copies of Clock or Data will be distributed, operating up to 2.0 GHz or 2.5 Gb/s, respectively. As such, the NB4N11S is ideal for SONET, GigE, Fiber Channel, Backplane and other Clock or Data distribution applications.

The NB4N11S has a wide input common mode range from $GND + 50\text{ mV}$ to $V_{CC} - 50\text{ mV}$. Combined with the $50\ \Omega$ internal termination resistors at the inputs, the NB4N11S is ideal for translating a variety of differential or single-ended Clock or Data signals to 350 mV typical LVDS output levels.

The NB4N11S is functionally equivalent to the EP11, LVEP11, SG11 or 7L11M devices and is offered in a small 3 mm X 3 mm 16-QFN package. Application notes, models, and support documentation are available at www.onsemi.com.
