Low-Power Off-line Primary Side Regulation Controller**AP3772**

General Description

The AP3772 is a high performance AC/DC power supply controller for battery charger and adapter applications. The device uses Pulse Frequency Modulation (PFM) method to build discontinuous conduction mode (DCM) flyback power supplies.

The AP3772 provides accurate constant voltage, constant current (CV/CC) regulation without requiring an opto-coupler and the secondary control circuitry. It also eliminates the need of loop compensation circuitry while maintaining good stability. The AP3772 can achieve excellent regulation and high average efficiency, yet meets no-load consumption less than 30mW. It can also achieve excellent dynamic performance while maintaining 30mW standby power with AP4340.

The AP3772 has a built-in fixed cable voltage drop compensation function. The magnitude of the cable compensation voltage is set as 6%, 3% and 0 of the rated output voltage respectively to meet various cables with different length and gauge. It also has an adjustable built-in line compensation function to achieve tight CC.

The AP3772 is available in SOT-23-6 package.

Features

- Primary Side Control for Tight Constant Current and Constant Voltage
- 30mW No-load Input Power
- Excellent Dynamic Performance with AP4340
- Bipolar Junction Transistor (BJT) Driving
- Proprietary Adjustable Line Compensation for CC Variation
- Constant and Built-in 6%, 3% and No Cable Voltage Drop Compensation
- Enhanced Audio Noise Suppression
- Open Circuit Protection
- Over Voltage Protection
- Short Circuit Protection
- SOT-23-6 package

Applications

- Adapters/Chargers for Cell/cordless Phones, PDAs, MP3 and Other Portable Devices
- LED Driver
- Standby and Auxiliary Power Supplies

Pin Configuration

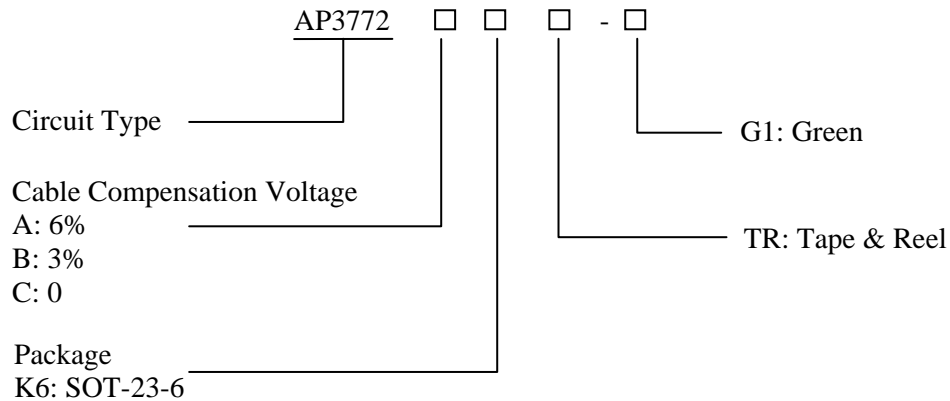

Figure 2. Pin Configuration of AP3772 (Top View)

Pin Description

Pin Number	Pin Name	Function
1	OUT	The OUT pin is used to turn on and turn off the power switch. When turning on the power switch, the OUT pin will output 30mA source current to support the base current of the power BJT. When turning off the power switch, the resistance between the OUT and GND will become to 5Ω
2	GND	The GND pin is the ground of the IC. When the power BJT is turned off, a fast reverse sinking current to the gate of BJT will flow out from this pin. Attention should be paid to in the PCB layout
3	VCC	The VCC pin supplies the power for the IC. In order to get the correct operation of the IC, a capacitor with low ESR should be placed as close as possible to the VCC pin
4	CS	The CS is the current sense pin of the IC. The IC will turn off the power BJT according to the voltage on the CS pin. When the power BJT is on, a current is output from the CS pin which is proportional to the line voltage to realize the function of line compensation
5	CPC	A capacitor more than 10nF should be connected to this pin. The voltage of CPC pin is linear to load of the system and it is used for the functions of cable voltage drop compensation and audio noise suppression
6	FB	The CV and CC regulation are realized based on the voltage sampling of this pin

**Low-Power Off-line Primary Side Regulation Controller****AP3772****Ordering Information**

Package	Temperature Range	Cable Compensation Voltage	Part Number	Marking ID	Packing Type
SOT-23-6	-40 to 85°C	6%	AP3772AK6TR-G1	GKA	Tape & Reel
		3%	AP3772BK6TR-G1	GKB	Tape & Reel
		0	AP3772CK6TR-G1	GKC	Tape & Reel

BCD Semiconductor's Pb-free products, as designated with "G1" suffix in the part number, are RoHS compliant and green.

Absolute Maximum Ratings (Note 1)

Parameter	Symbol	Value	Unit
Supply Voltage	V_{CC}	-0.3 to 30	V
CS, CPC to GND		-0.3 to 7	V
FB Input Voltage	V_{FB}	-40 to 10	V
Source Current at OUT Pin	I_{SOURCE}	Internally Limited	A
Operating Junction Temperature	T_J	150	°C
Storage Temperature	T_{STG}	-65 to 150	°C
Lead Temperature (Soldering, 10 sec)	T_{LEAD}	300	°C
Thermal Resistance (Junction to Ambient)	θ_{JA}	200	°C/W

Note 1: Stresses greater than those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "Recommended Operating Conditions" is not implied. Exposure to "Absolute Maximum Ratings" for extended periods may affect device reliability.
