## 1 Description

The ST2042 power distribution switches is intended for application where heavy capacitive loads and short-circuits are likely to be encountered. These devices incorporate $80 \mathrm{~m} \Omega$ N -channel MOSFET high-side power switches for power-distribution systems that require multiple powers switches in a single package. Each switch is controlled by an independent logic enable input. Gate drive is provided by an internal charge pump designed to control the power-switch rise times and fall times to minimize current surges during switching. The charge pump requires no external components and allows operation from supplies as low as 2.7 V . When the output load exceeds the current-limit threshold or a short is present, these devices limit the output current to a safe level by switching into a constant-current mode, pulling the overcurrent (OCx) logic output low.
A 10 ms deglitching circuit provides fault-blanking feature, preventing the OC_N jiitn le asserted during hot-insertion or short spikes of overcurrent conditions. When cin!inuous heavy overloads and short circuits increase the power dissipation in the switch. causing the junction temperature to rise, a thermal protection circuit shuts off the sivich io prevent damage. Recovery from a thermal shutdown is automatic once the derive has cooled sufficiently. Internal circuitry ensures the switch remains off unti velia input voltage is present. These power-distribution switches are designed t cuirent limit at 0.9 A.

## 4 Electrical ratings

### 4.1 Absolute maximum ratings

Stressing the device above the rating listed in the "Absolute Maximum Ratings" table may cause permanent damage to the device. These are stress ratings only and operation of the device at these or any other conditions above those indicated in the Operating sections of this specification is not implied. Exposure to Absolute Maximum Rating conditions for extended periods may affect device reliability. Refer also to the STMicroelectronics ${ }^{\text {TM }}$ SURE program and other relevant quality documents.
