- 250-mA Continuous Total Output Drive
- Two Output Power Switches, 35-V Maximum Operation
- Low-Side or High-Side Switch Configuration
- User Programmable Phasing of Output Switch LS2/HS2
- Internal Output Voltage Clamp for Driving Inductive Loads
- 9 V to 35 V Supply Voltage Range
- Current Limit Protection
- Thermal Shutdown Protection
- UVLO With User Programmable Time Delay

DP, M, OR NP PACKAGES (TOP VIEW)

description

The UCx7136 bipolar dual switch contains all the control and drive circuitry required to drive resistive, capacitive, and inductive loads as in industrial sensor applications. The output drivers are 250-mA NPN power switches that can switch a load between a voltage supply up to 35 V and GND with a continuous output current rating of 250 mA, combined or individually. Internal 46-V Zener clamps are provided to clamp collector-to-emitter NPN power switch voltages to safe levels when driving inductive loads. The two outputs can be configured in any combination of high side (load to GND) or low side (load to VCC). The output of switch 1 is fixed in phase with the CMOS compatible IN1 pin. The CMOS compatible exclusive OR gate inputs, IN2 and INV2, determine the output phase of switch 2. An under voltage lockout (UVLO) function is provided to disable both output NPN power switches until VCC is greater than 8 V. Both output NPN power switches can also be disabled past the UVLO enable trip point by an external user programmable time delay capacitor. An internal current limit function enables a low on/off duty cycle of the NPN power switches should the dc current go beyond 1 A. An internal thermal shutdown function disables the switches if the IC temperature reaches 155°C such as in an overcurrent condition.

pin descriptions

CDEL: A capacitor connected to this pin is used to program a turnon delay after the UVLO threshold has been reached. The UVLO function keeps the external capacitor connected to this pin discharged until VCC is greater than 8 V. After the UVLO upper trip point of 8 V has been exceeded, an internal 2.5-μA current source charges the capacitor from GND to 4.7 V. An internal voltage comparator enables the output NPN switches at 4 V, imparting a time delay after UVLO. As an added feature, an external switch can be connected in parallel with the user-programmable time-delay capacitor to disable the output NPN switches and reset the time delay capacitor by external means.

GND: The reference point for the internal reference, all thresholds, and the ground for the remainder of the device.

IN1: The digital-logic input pin that controls the state of the output NPN switch 1. When the IN1 pin is a logic low (0 V to 1.5 V), output switch 1 is off (non-conducting). When the IN1 pin is a logic high (3.5 V to 17.5 V), output switch 1 is on (conducting).

IN2, INV2: The digital logic input pins to the exclusive OR gate that controls the state of the output NPN switch 2. Refer to the truth table for description. A logic low is 0 V to 1.5 V; a logic high is 3.5 V to 17.5 V.

HS1: This pin is the emitter of output NPN switch 1.

HS2: This pin is the emitter of output NPN switch 2.

LS1: This pin is the collector of output NPN switch 1.

LS2: This pin is the collector of output NPN switch 2.

SD: This ground referenced open collector NPN output is asserted in the event of an overcurrent or during the start up delay due to the CDEL pin, non-conducting otherwise. The maximum SD current is 8 mA.

APPLICATION INFORMATION

TRUTHTABLE

| INV2 | IN2 | Switch 2 |
|------|------|----------|
| Low | Low | Off |
| High | Low | On |
| Low | High | On |
| High | High | Off |

turn on delay

The NPN output switches remains off until the external capacitor connected to CDEL charges up to the internal threshold voltage of 4 V with a charging current of 2.5 μ A. This off condition is independent of the state of the input logic pins IN1, IN2, and INV2. This capacitor charging imparts a delay time on the outputs that is equal to approximately 1.6 ms/nF. As an example, a 0.1- μ F capacitor connected to CDEL results in a 160 ms turnon delay after VCC crosses the 8-V UVLO threshold. If VCC drops below the 7.5-V hysteresis threshold, the CDEL capacitor is discharged immediately and both outputs turn off. The CDEL pin can also be externally driven low to restart the turnon delay sequence. The minimum acceptable value for the CDEL capacitor, when driving a capacitive load, is determined by:

$$C_{DEL(MIN)} = \left(\frac{C_{LOAD} \times V_{LOAD}}{2445} \right) \quad (1)$$

Where C_{LOAD} is equal to the output capacitive load and V_{LOAD} is equal to the voltage rail of the output load. The maximum switching frequency to drive a capacitive load, C_{LOAD} , is given by:

$$f_{(MAX)} = \frac{1}{9.4 \times C_{DEL} \times \left[1 - e \left(\frac{-C_{LOAD} \times V_{LOAD}}{5 \times 10^3 \times C_{DEL}} \right) \right] + C_{LOAD} \times V_{LOAD}} \quad (2)$$

overcurrent indication

The open collector output SD pin can be used to drive an LED to signal when an overload condition is present. The LED turns on, through an external pullup, when the outputs are shut down due to an overcurrent. The maximum SD current is 8 mA.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBsolete: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
