6. Exceeding any one or combination of these limits may cause permanent damage to this device.
7. MACOM does not recommend sustained operation near these survivability limits.
8. For saturated performance it is recommended that the sum of $(3 * V_{DD} + \text{abs}(V_{GG})) \leq 175 \text{ V}$.
9. CW operation at V_{DD} voltages above 50 V is not recommended.
10. Operating at nominal conditions with $T_J \leq 200^\circ\text{C}$ will ensure $\text{MTTF} > 1 \times 10^6$ hours. Junction temperature directly affects device MTTF and should be kept as low as possible to maximize lifetime.
11. Junction Temperature (T_J) = $T_C + \Theta_{JC} * ((V * I) - (P_{OUT} - P_{IN}))$

Typical CW thermal resistance (Θ_{JC}) = 5.8°C/W
