### 4.6 S.M.A.R.T. Attributes

The following table defines the current Virtium SMART data attributes that are supported.

Customers may view this data using the Linux SMARTmontools package. This package and the associated **smartctl** command should be used with options **-a**, **-i**, and **-d sat** for best viewing. The command `$ smartctl -d sat -a -i /dev/sdb` was used to retrieve the data below.

Attribute ID	Attribute Name	Attribute Description
0x0C	Power Cycle Count	Number of Power On cycles
0xC4	Spare block count	The amount of available spare blocks. Attribute value. The value returned here is the percentage of remaining spare blocks summed over all flash chips, i.e.(100 × current spare blocks / initial spare blocks)
0xE5	Erase count	The value returned here is an estimation of the remaining card life, in percent, based on the number of flash block
