RELATIVE SPECTRAL POWER DISTRIBUTION (18 V, $I_f = 700$ mA; 36 V, $I_f = 350$ mA, $T_j = 85$ °C)

The following graph is the result of a series of pulsed measurements at 350 mA for the 18-V CXA1310 LED and 700 mA for the 36-V CXA1310 LED and $T_j = 85$ °C.

ELECTRICAL CHARACTERISTICS

The following graph is the result of a series of steady-state measurements.

PRELIMINARY - January 17, 2014

RELATIVE LUMINOUS FLUX

The relative luminous flux values provided below are the ratio of:

- Measurements of CXA1310 at steady-state operation at the given conditions, divided by
- Flux measured during binning, which is a pulsed measurement at 700 mA at $T_j = 85\text{ }^\circ\text{C}$ for the 18-V CXA1310 LED.
-

For example, at steady-state operation of $T_c = 55\text{ }^\circ\text{C}$, $I_f = 500\text{ mA}$, the relative luminous flux ratio is 80% in the chart below. A CXA1310 LED that measures I_m during binning will deliver $I_m (* 0.8)$ at steady-state operation of $T_c = 55\text{ }^\circ\text{C}$, $I_f = 500\text{ mA}$.

PRELIMINARY - January 17, 2014

RELATIVE LUMINOUS FLUX

The relative luminous flux values provided below are the ratio of:

- Measurements of CXA1310 at steady-state operation at the given conditions, divided by
- Flux measured during binning, which is a pulsed measurement at 350 mA at $T_j = 85\text{ }^\circ\text{C}$ for the 36-V CXA1310 LED.
-

For example, at steady-state operation of $T_c = 55\text{ }^\circ\text{C}$, $I_f = 250\text{ mA}$, the relative luminous flux ratio is 80% in the chart below. A CXA1310 LED that measures I_m during binning will deliver $I_m (\cdot 0.8)$ at steady-state operation of $T_c = 55\text{ }^\circ\text{C}$, $I_f = 250\text{ mA}$.

THERMAL DESIGN

The CXA family of LED arrays can include over a hundred different LED die inside one package, and thus over a hundred different junction temperatures (T_j). Cree has intentionally removed junction-temperature-based operating limits and replaced the commonplace maximum T_j calculations with maximum ratings based on forward current (I_f) and case temperature (T_c). No additional calculations are required to ensure the CXA LED is being operated within its designed limits. Please refer to page 2 for the Operating Limit specification.

Cree has measured the temperature at the bottom of the package, commonly referred to as the solder point (T_{sp}), and found this value to be equivalent to the temperature at the T_c location at the top of the package once the LED has reached thermal equilibrium. There is no need to calculate for T_j inside the package, as the thermal management design process, specifically from T_{sp} to ambient (T_a), remains identical to any other LED component. For more information on thermal management of Cree XLamp LEDs, please refer to the XLamp Thermal Management application note at www.cree.com/xlamp_app_notes/thermal_management. For CXA soldering recommendations and more information on thermal interface materials (TIM) and connection methods, please refer to the Cree XLamp CXA Family LEDs soldering and handling document at www.cree.com/xlamp_app_notes/CXA_SH.

To keep the CXA1310 LED at or below the maximum rated T_c , the case to ambient temperature thermal resistance (R_{c-a}) must be at or below the maximum R_{c-a} value shown on the following graphs, depending on the operating environment. The y-axis in the graph is a base 10 logarithmic scale.

As the figure at right shows, the R_{c-a} value is the sum of the thermal resistance of the TIM (R_{tim}) plus the thermal resistance of the heat sink (R_{hs}).

NOTES

Lumen Maintenance Projections

Cree now uses standardized IES LM-80-08 and TM-21-11 methods for collecting long-term data and extrapolating LED lumen maintenance. For information on the specific LM-80 data sets available for this LED, refer to the public LM-80 results document at www.cree.com/xlamp_app_notes/LM80_results.

Please read the XLamp Long-Term Lumen Maintenance application note at www.cree.com/xlamp_app_notes/lumen_maintenance for more details on Cree’s lumen maintenance testing and forecasting. Please read the XLamp Thermal Management application note at www.cree.com/xlamp_app_notes/thermal_management for details on how thermal design, ambient temperature, and drive current affect the LED junction temperature.

Vision Advisory Claim

Users should be cautioned not to stare at the light of this LED product. The bright light can damage the eye.
