DATA SHEET

SKY12323-303LF: 0.5-3.0 GHz Five-Bit Digital Attenuator (1 dB LSB)

Applications

- Transceiver transmit automatic level control or receive automatic gain control in GSM, CDMA, WCDMA, WLAN, Bluetooth®, or Zigbee® land mobile radio base stations or terminal equipment
- General-purpose signal attenuation in telecommunications and instrumentation applications

Features

- Broadband operation: 0.5 to 3.0 GHz
- Attenuation range: 31 dB
- LSB attenuation: 1 dB
- Low insertion loss: 1.4 dB @ 900 MHz
- Positive voltage operation: 2.7 to 5.5 V
- Low current consumption: <100 μ A @ 3 V
- High IIP3: +45 dBm
- Small, MSOP-10 (10-pin, 3 x 3 mm) package with exposed paddle (MSL1, 260 °C per JEDEC J-STD-020)

 Skyworks Pb-free products are compliant with all applicable legislation. For additional information, refer to *Skyworks Definition of Lead (Pb)-Free*, document number SQ04-0073.

Description

The SKY12323-303LF is a monolithic, GaAs binary-weighted five-bit single positive control voltage digital attenuator. The device operates from 0.5 to 3.0 GHz. DC power consumption is very low, typically 100 μ A maximum, with a control and supply voltage of 3 V.

The SKY12323-303LF has an LSB of 1 dB and total attenuation of 31 dB. The two RF ports are bilateral; each can be used as the RF input or the RF output. An external supply voltage of 2.7 to 5.5 V is required.

Figure 1. SKY12323-303LF Block Diagram

The SKY12323-303LF is comprised of five cascaded fixed attenuators, each of which has a shunt bypass switch. Beginning at the 1 dB LSB, each succeeding fixed attenuator produces twice the attenuation of the preceding stage.

The state of each bypass switch is controlled by the logic level voltage applied to the associated control voltage input. A logic high voltage closes the associated switch, which bypasses that fixed attenuator stage; a logic low opens the switch to force the input signal to that stage through the associated attenuator.

A functional block diagram is shown in Figure 1. The pin configuration and package are shown in Figure 2. Signal pin assignments and functional pin descriptions are provided in Table 1.

Electrical and Mechanical Specifications

The absolute maximum ratings of the SKY12323-303LF are provided in Table 2. Electrical specifications are provided in Table 3.

Typical performance characteristics of the SKY12323-303LF are illustrated in Figures 3 through 6.

The state of the SKY12323-303LF is determined by the logic provided in Table 4.

Table 2. SKY12323-303LF Absolute Maximum Ratings

Parameter	Symbol	Minimum	Typical	Maximum	Units
RF input power ($V_{CTL} = 0/8$ V): f < 500 MHz f ≥ 500 MHz	P_{IN}			+30 +35	dBm dBm
Supply voltage	V_S	-0.2		+0.2	V
Control voltage	V_{CTL}	-0.2		+8	V
Operating temperature	T_{OP}	-40		+85	°C
Storage temperature	T_{STG}	-65		+150	°C

Note: Exposure to maximum rating conditions for extended periods may reduce device reliability. There is no damage to device with only one parameter set at the limit and all other parameters set at or below their nominal value. Exceeding any of the limits listed here may result in permanent damage to the device.

CAUTION: Although this device is designed to be as robust as possible, Electrostatic Discharge (ESD) can damage this device. This device must be protected at all times from ESD. Static charges may easily produce potentials of several kilovolts on the human body or equipment, which can discharge without detection. Industry-standard ESD precautions should be used at all times.

This Table shows the logic required for the major bits and full attenuation. Bit states need to be used in combination to set the sum of the bits selected.

Evaluation Board Description

The SKY12323-303LF Evaluation Board is used to test the performance of the SKY12323-303LF digital attenuator. An assembly drawing for the Evaluation Board is shown in Figure 7 and an Evaluation Board schematic diagram is shown in Figure 8.

Package Dimensions

Package dimensions for the 10-pin MSOP-10 are shown in Figure 9, and tape and reel dimensions are provided in Figure 10.

Package and Handling Information

Instructions on the shipping container label regarding exposure to moisture after the container seal is broken must be followed. Otherwise, problems related to moisture absorption may occur when the part is subjected to high temperature during solder assembly.

THE SKY12323-303LF is rated to Moisture Sensitivity Level 1 (MSL1) at 260 °C. It can be used for lead or lead-free soldering. For additional information, refer to the Skyworks Application Note, *Solder Reflow Information*, document number 200164.

Care must be taken when attaching this product, whether it is done manually or in a production solder reflow environment. Production quantities of this product are shipped in a standard tape and reel format.

Notes:

1. Carrier tape: black conductive polystyrene.
2. Cover tape material: transparent conductive HSA.
3. Cover tape size: 9.2 mm width.
4. Ten sprocket hole pitch cumulative tolerance = ±0.20 mm.
5. All measurements are in millimeters.
6. Standard reel size is 7 inches. Standard reel quantity is 3000 pcs.
