REFERENCE DOCUMENTATION:

The Unigen JUNO-M (UGWM1US) WirelessUSB™ module adaptation of the Cypress Semiconductor CYWUSB6934 LS 2.4GHz DSSS Radio SOC is represented in this document. The detail provided is information for using JUNO-M in a digital electronic device and is only a “companion” document to Cypress Semiconductors’ CYWUSB6934 documentation for the above noted part.

The CYWUSB6934 LS 2.4GHz DSSS Radio SOC 10-meter information and technical details (ex. register settings, timing, application interfaces, clocking and power management, etc.) may be obtained from the Cypress Semiconductor web site or contacting Cypress’s authorized sales representatives.

The following is a list of required documents and locations known at the time of publication that accompany this datasheet.

WirelessUSB™ - UGWM1US

Solutions for a Real Time World

Data Sheet

INTRODUCTION:

Unigen JUNO-M WirelessUSB™ 10 and 50 meter range module represent the convergence of emerging wireless connectivity solutions and the USB "Plug-N-Play" ease of operation. WirelessUSB, as created by Cypress Semiconductor, is a low-cost, 2.4GHz communication protocol designed for use in commercial, industrial, consumer, and computer product applications needing highly reliable data connectivity.

JUNO-M module combine Cypress Semiconductor's wireless and USB expertise with Unigen's module design, manufacturing, and testing proficiency to create production ready, pre-certified modules that are easily integrated into existing, and new product designs.

JUNO-M module offer immediate, drop-in design solutions and use the native Operating System HID drivers to seamlessly enumerate and operate mouse, keyboard, and gaming devices, or other devices using the HID specification for communication with the host systems.

FEATURES:

- **CYWUSB6934 LS 2.4GHz DSSS Radio SOC**
- **Operates in the 2.4 to 2.483GHz, unlicensed frequency range (ISM – Industrial, Scientific and Medical)**
- **-95dBm receive sensitivity**
- **Range options of 10 and 50 meters**
- **Data Rate of 62.5kbits/sec**
- **SPI interface**
(up to 2MHz data rate)
- **Operating Voltage Requirement**
2.7 – 3.6Vdc
- **Multiple connection interfaces available**
- **Small PCBA Design:**

DESCRIPTION:

JUNO-M WirelessUSB™ Modules are tightly integrated, low-cost, high-reliability 2.4GHz TX/RX communications modules for use with Human Interface Device (HID) class compliant products.

The JUNO-M 10-meter modules use the Cypress Semiconductor CYWUSB6934 LS 2.4GHz DSSS Radio SOC device. The JUNO-MM 50-meter modules use the Cypress Semiconductor CYWUSB6935 LR 2.4GHz DSSS Radio SOC device.

JUNO-M modules are a complete radio solution requiring only integration into an existing, or new device.

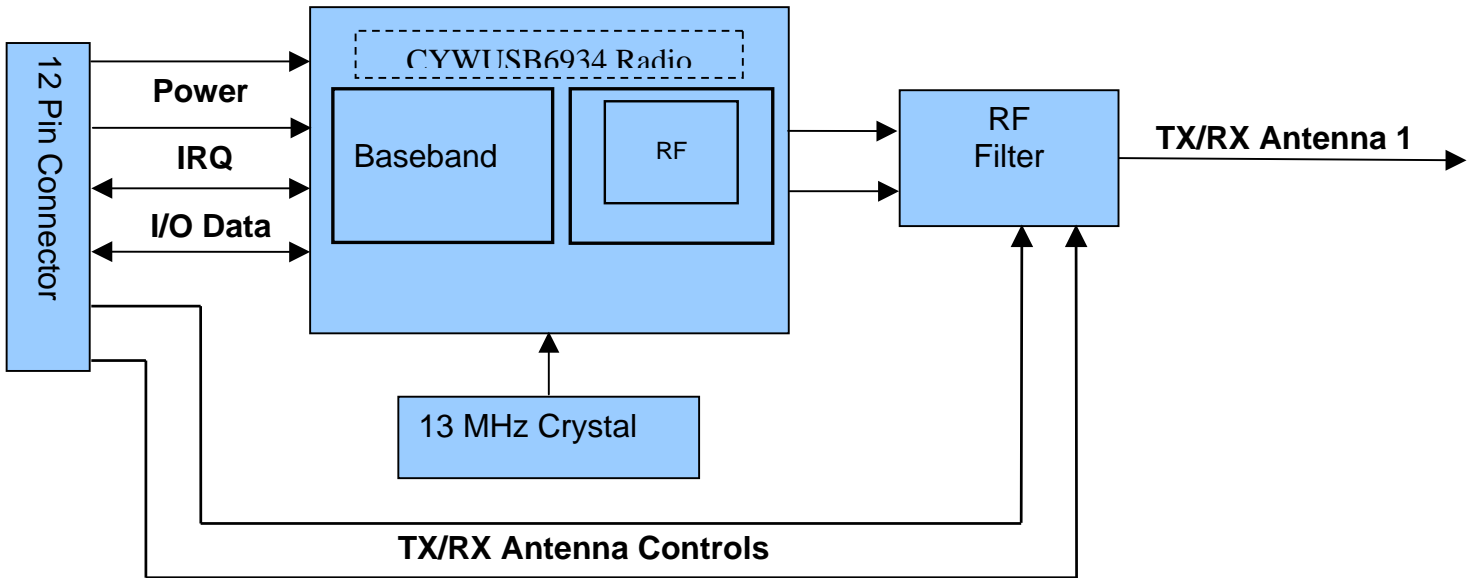

JUNO-M modules are 100% tested for functional operation and are pre-screened for FCC Part 15 compliance. The modules are supplied with an integrated antenna. For applications where the integrated antenna is unsuitable, models are available that support using an external coaxial antenna. Unigen offers 2dBi gain antennae for customers requiring an external antenna.

JUNO-M modules are intended for use in computer and consumer product/device applications and use the OS native HID class drivers to enable compliant devices. In most applications, *no additional host drivers are required*. The modules are suitable for use in embedded and/or industrial applications as well.

The JUNO-M is less than 1/2"sq and is available with a keyed shrouded header mounting directly to the matching receptacle on the PCB. The modules are available bare-board for application off board within the device.

PIN FUNCTIONS:

- MOSI:** SPI Input from MCU
Receives commands/data from the device microcontroller.
- MISO:** SPI Output to MCU
Transmits requests/data to the device microcontroller.
- SSn:** SPI Slave Select Enable Input
SPI enable
- IRQ:** Interrupt Request
The Interrupt Request Pin Select bits are used to determine the drive method of the IRQ pin
- GND:** Module Ground
- RSTn:** Module Reset
Active LOW reset switch
- SCK:** SPI Input Clock
- PDn:** Power Down
Driving signal LOW will put the module in SUSPEND MODE (X13OUT = 0 when PDn is LOW)
- Vcc:** Module Input Power

Regulatory Compliance Statement:

The module has been pre-scanned against the relevant requirements of standards: EN 300 328, EN 301 489-17, FCC part 15 and Industry Canada RSS-210. The module is certified by the regulatory authorities in the USA and Canada and complies with the applicable essential requirements of the Radio & Telecommunication Terminal Equipment (R&TTE) directive in the EU. The module can thus be incorporated into products sold worldwide with little or no additional testing of the module itself. ***The end product must meet the appropriate technical requirements that apply to that product type but re-certification of the radio module is not required in the USA and Canada.***

In the EU, the integrator is responsible for evaluating their product type per the essential performance requirements of the R&TTE directive (except those associated with the module), declaring compliance and then notifying the member states prior to marketing the product (because the module uses a frequency band that is not harmonized in the EU). It is the responsibility of the module integrator to obtain the necessary approvals to sell products incorporating this module in other countries outside of North America and the EU. The report of measurements performed on the module in compliance with the FCC rules and EN standards can be used in these submittals (as the requirements in many other markets around the world are based in part or in whole on the standards prevalent in North America and the EU).
