- Modern ABS systems
- Transmission speed sensing

### Features

- No external components needed
- Frequency range from 1 to 5000 Hz
- Two wire standard current interface
- Dynamic self-calibration principle
- Excellent sensitivity (min  $\Delta B < 1.5$  mT)
- South and North pole pre-induction possible
- Ultra thin PG-SSO package
- 1.8 nF overmoulded capacitor for enhanced EMC (C-versions)
- Single chip solution
- Output switching with 1 st magnetic edge (-1 versions)

### Functional Description

THE DIFFERENTIAL Hall sensor IC detects the motion of ferromagnetic and permanent magnet structures by measuring the differential flux density of the magnetic field. To detect the motion of ferromagnetic objects the magnetic field must be provided by a back biasing permanent magnet. Magnetic and device offsets are cancelled by a self-calibration algorithm within a few transitions. The ON and OFF state of the IC are indicated by High and Low current consumption.
