Read Statement

1. The datasheets and other product information on the site are all from network reference or other public materials, and the copyright belongs to the original author and original published source. If readers and copyright owners have any objections, please contact us and we will deal with it in a timely manner.

2. The Chinese datasheets provided on the website is a Chinese translation of the English datasheets. Its purpose is for reader's learning exchange only and do not involve commercial purposes. The translation cannot be automatically updated with the original manuscript, and there may also be improper translations. Readers are advised to use the English manuscript as a reference for more accurate information.

3. All product information provided on the website refer to solutions from manufacturers' technical support or users the contents may have differences in description, and readers are advised to take the original article as the standard.

4. If you have any questions, please contact us at marketing@iczoom.com and mark the subject with "Datasheets".

Thin short type (Mounting direction: V type)

Short type (Mounting direction: H type)

Middle type

Long type (Mounting direction: H type)

Long type (Mounting direction: V type)

What is area reflective type? The sensor emits a ray of light toward the human body and detects the distance and determine whether there is a person within a given distance of the sensor. If the sensor detects a person, it sets an output non-contact switch to ON.

Compliance with RoHS Directive

MOTION SENSOR (AREA REFLECTIVE TYPE)

FEATURES

1. Now even more miniature.

The new thin type cuts 35% from the thickness of the previous short type. Device installing is now easier than ever. Existing short type W10 x H20 x D19.5 mm W.394 x H.787 x D.768 inch

Thin short type

W10 x H20 x D12.7 mm W.394 x H.787 x D.500 inch *"W" and "H" are detection value measurements.

2. Certain detection unaffected by the reflectance of the object

The sensor can provide stable detection that is not affected by the condition (color or material of the clothing) or parts (skin, hair, etc.) of the object being monitored. (Reflectance 18% to 90%). Excellent performance even when the detection surface is dirty.

3. Only connecting DC power supply for operating

Built-in oscillation circuit type obviates the hitherto existing need for start signal input.

4. Use in adjacent positions is possible These sensors can be located in adjacent positions, because the timing of the external trigger signals can be adjusted so that the beam frequency of each adjacent sensor will not interfere with the other.

5. Battery drive possible

By applying longer interval for the trigger signal, you can reduce the total power consumption.

6. Can be used with a number of different supply voltages.

1) The 5V DC type (4.5 to 6.5V DC) 2) The free-ranging power type (6.5 to 27V DC)

They support the DC power supplies of electronic products and equipment in general. *The thin short type is only available for 5V DC.

7. The open collector output system makes for easy load drive.

MAMOTION SENSOR Series

These sensors provide a continuous output during detection because the output system makes it easy to drive the load.

They achieve an output performance of 30V, Built-in oscillation circuit type: 100 mA, External triggering type: 10 mA (Thin short type: 100 mA). Also, the thin short type is available in a PNP open collector type in addition to a NPN open collector type.

APPLICATIONS

- 1. Water-based product market
- Automatic lighting of wash basin units Toilets
- Automatic water flow from faucets
- 2. Stores and financial instructions
- Automatic doors
- Automatic lighting
- Cash dispensing machines
- Automatic teller machines
- Visitor detecting sensors
- 3. Amusement market
- Automatic lighting for game display
- 4. Medical field
 - Non-contact switch
 - 5. Others
 - Automatic ticket gates
 - Seat-taking sensors
 - Detection of passengers getting on and off a bus

Note: * Install so that light from direct light sources does not enter the sensor (within 30x of the sensor light beam).

- For thin short type: Standard reflection board: 100 mm 3.937 inch square area, 90% reflection rate.
- For short type: Standard reflection board: 100 mm 3.937 inch square area, 90% reflection rate.
- For middle type: Standard reflection board: 200 mm 7.874 inch square area,
- 90% reflection rate.For long type:

Standard reflection board: 500 mm 19.685 inch square area, 90% reflection rate.

<Fig. 1> [Brightness of sensor surface]

Note: Light from direct light sources (sunlight, strobe light, inverter illumination, reflected light from glass or mirrors etc.) that enters the sensor from within the prohibited range can cause the sensor to operate erroneously.

Notes: 1. Detecting an object within the maximum preset detection distance.

2. Distance deviation = $\frac{a-b}{a} \times 100 (\%)$

a: detection distance of detection target with reflectance of 90%. b: detection distance of standard detection target with reflectance of 18%.

| N | | | | | | | | | | | |

Notes: 1. The thin short type is only available for 5V DC.
2. The ratio between the 4 operating modes (*a to *d) depends on the external trigger period and detector time, and the current consumption

3. A high level is established in the open state due to pull-up by the internal circuit. (Refer to the connector wiring diagram.)

4. The output transistor is open collector.

The output transistor is turned ON by the sensor detection status and turned OFF by its non-detection status.

(PNP output types of the AMA series)

TIMING CHART

1. Built-in oscillation circuit type

Notes: 1. Circuit stability time : Max. 12 ms

2. During the time taken for the circuit to stabilize after the power is turned on, the ON/OFF status of the output transistor is not determined by whether the sensor is in the detection status or non-detection status.

2. External triggering type

Notes: 1. Circuit stability time : Max. 12 ms 2. During the time taken for the circuit to stabilize after the power is turned

on, the ON/OFF status of the output transistor is not determined by

whether the sensor is in the detection status or non-detection status.

Tt: Min. 5ms Tr: Max. 5ms External trigger Vт Tw Change (ON to OFF or OFF to ON) Output

external trigger has been input.

HOW TO USE

· Wiring diagram of connector

Notes: 1. The output transistor has an open collector structure

- Detection status: Output transistor ON (connected to GND)
- Non-detection status: Output transistor OFF (open state) 2. The status of the external trigger input is as follows:

 - Open at the high level
 GND (less than 0.8V) at the low level
- Under no circumstances must a high-level voltage be applied.

3. To maintain the power supply noise performance, be certain to connect a capacitor (33mF or more) to the sensor power supply input terminal in order to stabilize the power supply voltage.

NOTES

1. Environment

1) Avoid using the sensor in environments containing excessive amounts of steam, dust, corrosive gas, or where organic solvents are present. 2) When the sensor is used in noisy environments, connect a capacitor (minimum 33 μ F) across its power input terminals.

2. Wiring

1) Check all wiring before applying power. Incorrect wiring may damage the internal circuit (in particular, check that the connection to the power supply is not reversed.)

2) Avoid excessive removing and replacing of the connector.

3. Detector surface (Optical surface)

1) Keep the detector surface clean. Excessive dust or dirt on the detector surface will deteriorate the sensing performance.

2) Do not allow condensation or freezing to occur on the surface of the sensor. If condensation or freezing does occur at low temperatures, the sensor may not detect objects correctly. 3) This product is designed to detect the existence of human body. The sensor will not detect objects consisting of a low reflective material (e.g., an object coated with black rubber, etc.) or of a highly reflective material (e.g., mirror, glass, coated paper, etc.)

4) The front surface of the lens and case are made of polycarbonate resin and can withstand water, alcohol, oils, salts and weak acids. Other fluids such as alkalines, aromatic hydrocarbons and halogenated hydrocarbons may melt or swell the lens and case, please do not have such fluids touch the lens and case. 5) If you use the sensor with a cover or filter connected to the front of the sensor. the sensor may detect the cover itself, the detection distance can change, and unstable operation can result. 6) When multiple sensors are to be used side by side, please verify that there will be no mutual interference by installing them with the proper spacing, depending on the type as shown below.

| Model number | Sensor spacing |
|--------------|------------------|
| AMB1 series | 5 cm 1.969 inch |
| AMA1 series | 8 cm 3.150 inch |
| AMB2 series | 10 cm 3.937 inch |
| AMB3 series | 20 cm 7.874 inch |

7) To protect the inner circuit, wiring should be max. 3 m 9.843 ft..

4. Recommended installation procedure

Install the photoelectric sensor so that it is orientated correctly in relation to the pass directions of the target objects as shown in the figure below.

 $* \rightarrow$ stands for pass direction of the target object.

For the general precautions, refer to the Notes for Motion Sensors on next page.
