## Precautions

To ensure safe sensor operation, please follow the following precautions:

### ■ WIRING

#### Power Supply Voltage

Make sure that the power supply to the Sensor is within the rated voltage range.

#### Load Short-circuiting

Do not short-circuit the load, or the Sensor may be damaged.

#### Polarity

Correct polarity wiring is required to prevent damage to the sensor.

#### Connection Without Load

Do not connect power supply to the Sensor with no load connected, or the internal elements may explode or burn.

### ■ OPERATING ENVIRONMENT

Do not use the Sensor in locations with explosive or flammable gas.

### ■ SETTINGS

#### Power Reset Time

The Sensor is ready to operate 100 ms after the Sensor is turned ON. If the load and Sensor are connected to independent power supplies respectively, be sure to turn ON the Sensor before turning the load ON.

### ■ CONNECTIONS

#### M8 Metal Connector

- Turn off power before disconnecting the sensor.
- Remove the connector cover before connecting or disconnecting the metal connector.
- Secure the connector cover by hand. Do not use any pliers, or the connector may be damaged.
- The proper tightening torque range is between 0.3 and 0.4 N • m. Be sure to tighten the connector securely in order to maintain the the specified degree of protection and to keep the connector from loosening due to vibration.

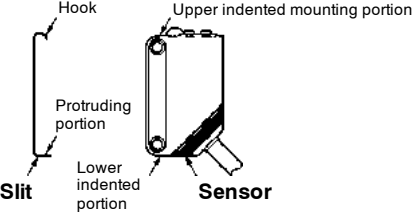

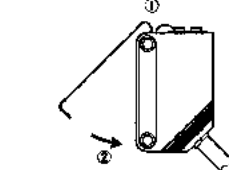

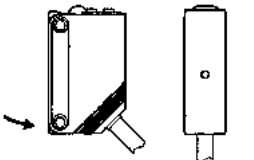

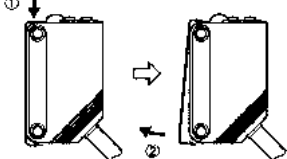

### ■ MOUNTING

Use M3 screws to mount the sensor and tighten each screw to a maximum torque of 0.53 N • m.
