## Direct Rambus™ Clock Generator

### General Description

The **ICS9212-13** is a High-speed clock generator providing up to 600 MHz differential clock source for direct Rambus™ memory system. It includes DDLL (Distributed Delay locked loop) and phase detection mechanism to synchronize the direct Rambus™ channel clock to an external system clock. **ICS9212-13** provides a solution for a broad range of Direct Rambus memory applications. The device works in conjunction with the ICS9250-09.

The **ICS9212-13** power management support system turns “off” the Rambus™ channel clock to minimize power consumption for mobile and other power-sensitive applications. In “clock off” mode the device remains “on” while the output is disabled, allowing fast transitions between clock-off and clock-on states. In “power down” mode it completely powers down for minimum power dissipation.

The **ICS9212-13** meets the requirements for input frequency tracking when the input frequency clock is using Spread Spectrum clocking and also the optimum bandwidth is maintained while attenuating the jitter of the reference signal.

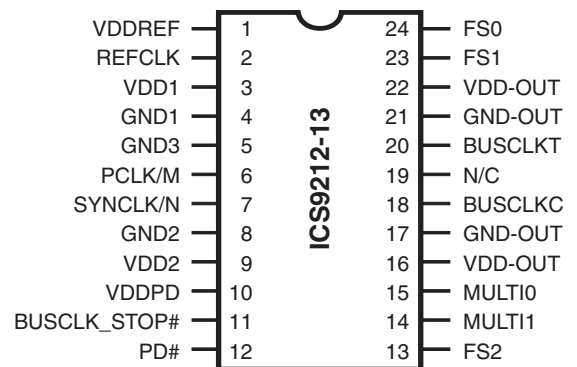

### Features

- Compatible with all Direct Rambus™ based IC s
- Up to 600 MHz differential clock source for direct Rambus™ memory system
- Cycle to cycle jitter is less than 40ps
- $3.3 \pm 5\%$  supply
- Synchronization flexibility: Supports Systems that need clock domains of Rambus channel to synchronize with system or processor clock, or systems that do not require synchronization of the Rambus clock to another system clock
- Excellent power management support
- REFCLK input is from the ICS9250-09.

## Pin Descriptions

Pin #	Name	Type	Description
1	VDDREF	REFV	Reference voltage for refclk, to be connected to CK133
2	REFCLK	IN	Reference clock, to be connected to CK133
3	VDD1	PWR	3.3 V power supply used for PLL
4	GND1	PWR	Ground for PLL
5	GND3	PWR	Ground for control inputs
6,7	PCLK/M, SYNCLK/N	IN	Phase controller input, used to drive a phase aligner that adjusts the phase of the busclk.
8	GND2	PWR	Ground for phase aligner
9	VDD2	PWR	3.3 V power supply used for phase aligner
10	VDDPD	REFV	Reference voltage for phase detector inputs connected to the controller
11	BUSCLK_STOP#	IN	Active low output enable/disable
12	PD#	IN	3.3V CMOS active low power down, the device is powered down when the "(PD#) =0"
14,15	MULTI (0:1)	IN	3.3V CMOS PLL Multiplier select, logic for selecting the multiply ratio for the PLL from the input REFCLK
16	VDD_OUT	PWR	3.3V supply for clock out puts
17	GND_OUT	PWR	Ground for clock outputs
18	BUSCLKC	OUT	Out put clock connected to the Rambus channel. This output is the complement of BUSCLK
19	N/C	N/C	NOT USED
20	BUSCLKT	OUT	Output clock connected to the Rambus channel. This output is the true component of BUSCLK
21	GND_OUT	PWR	Ground for clock outputs
22	VDD_OUT	PWR	3.3V supply for clock out puts
13,23,24	FS(0:2)	IN	3.3V CMOS Mode control, used in selecting bypass, test, normal, and output test (OE)

## Absolute Maximum Ratings

Supply Voltage	4.0 V
Logic Inputs	GND -0.5 V to V <sub>DD</sub> +0.5 V
Ambient Operating Temperature	0°C to +70°C
Storage Temperature	-65°C to +150°C

Stresses above those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only and functional operation of the device at these or any other conditions above those listed in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

## Recommended Layout

### General Layout Precautions:

- 1) Use a ground plane on the top layer of the PCB in all areas not used by traces.
- 2) Make all power traces and vias as wide as possible to lower inductance.

### Capacitor Values:

C3 : 100pF ceramic

All unmarked capacitors are 0.01 $\mu$ F ceramic

### Connections to VDD:
