# **ANY-FREQUENCY PRECISION CLOCK MULTIPLIER/JITTER ATTENUATOR**

#### Features

- Generates any frequency from 2 kHz to 945 MHz and select frequencies to 1.4 GHz from an input frequency of 2 kHz to 710 MHz
- Ultra-low jitter clock output with jitter generation as low as 0.3 ps rms (50 kHz–80 MHz)
- Integrated loop filter with selectable loop bandwidth (60 Hz to 8.4 kHz)
- Meets OC-192 GR-253-CORE jitter specifications
- Clock or crystal input with manual clock selection
- Selectable clock output signal format (LVPECL, LVDS, CML, CMOS)

#### Applications

- 10G/40G/100G OTN line cards
- SONET/SDH OC-48/STM-16 and OC-192/STM-64 line cards
- GbE/10GbE, 1/2/4/8/10GFC line cards
- ITU G.709 and custom FEC line cards
- Synchronous Ethernet
- Optical modules

- Support for ITU G.709 and custom OTN FEC ratios (e.g. 255/238, 255/237, 255/236)
- Supports various frequency translations for Synchronous Ethernet
- LOL, LOS alarm outputs
- I<sup>2</sup>C or SPI programmable
- On-chip voltage regulator for 1.8 V ±5%, 2.5 V ±10% or 3.3 V ±10% operation
- Small size: 6 x 6 mm 36-lead QFN
- Pb-free, ROHS compliant
- Wireless basestations
- Data converter clocking
- DSLAM/MSANs
- Test and measurement
- Broadcast video
- Discrete PLL replacement

#### Description

The Si5319 is a jitter-attenuating precision M/N clock multiplier for applications requiring sub 1 ps jitter performance. The Si5319 accepts one clock input ranging from 2 kHz to 710 MHz and generates one clock output ranging from 2 kHz to 945 MHz and select frequencies to 1.4 GHz. The Si5319 can also use its crystal oscillator as a clock source for free-running clock generation. The device provides virtually any frequency translation combination across this operating range. The Si5319 input clock frequency and clock multiplication ratio are programmable through an I<sup>2</sup>C or SPI interface. The Si5319 is based on Silicon Laboratories' third-generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis and jitter attenuation in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The DSPLL loop bandwidth is digitally programmable, providing jitter performance optimization at the application level. Operating from a single 1.8, 2.5, or 3.3 V supply, the Si5319 is ideal for providing clock multiplication and jitter attenuation in high performance timing applications.

1. Current draw is independent of supply voltage.

- No under- or overshoot is allowed.
   LVPECL outputs require nominal V<sub>DD</sub> ≥ 2.5 V.
   This is the amount of leakage that the 3-level inputs can tolerate from an external driver. See Si53xx Family Reference Manual for more details.
- 5. LVPECL, CML, LVDS and low-swing LVDS measured with Fo = 622.08 MHz.

 $(V_{DD} = 1.8 \pm 5\%, 2.5 \pm 10\%, \text{ or } 3.3 \text{ V} \pm 10\%, \text{ T}_{A} = -40 \text{ to } 85 \text{ °C})$ 

 LVPECL outputs require nominal V<sub>DD</sub> ≥ 2.5 V.
 This is the amount of leakage that the 3-level inputs can tolerate from an external driver. See Si53xx Family Reference Manual for more details.

5. LVPECL, CML, LVDS and low-swing LVDS measured with Fo = 622.08 MHz.

#### Table 2. DC Characteristics (Continued)

(V<sub>DD</sub> = 1.8 ± 5%, 2.5 ±10%, or 3.3 V ±10%, T<sub>A</sub> = –40 to 85 °C)

| Parameter                   | Symbol          | Test Condition                         | Min                  | Тур | Мах | Unit |

| Output Voltage High         |                 | IO = –2 mA<br>V <sub>DD</sub> = 2.97 V | V <sub>DD</sub> -0.4 | —   | —   | V    |
| Disabled Leakage<br>Current | I <sub>OZ</sub> | RSTb = 0                               | -100                 | —   | 100 | μA   |

Notes:

- 1. Current draw is independent of supply voltage.
- 2. No under- or overshoot is allowed.
- LVPECL outputs require nominal V<sub>DD</sub> ≥ 2.5 V.
   This is the amount of leakage that the 3-level inputs can tolerate from an external driver. See Si53xx Family Reference Manual for more details.
- 5. LVPECL, CML, LVDS and low-swing LVDS measured with Fo = 622.08 MHz.

# 2. Typical Phase Noise Plots

The following typical phase noise plot was taken using a Rohde and Schwarz SML03 RF Generator as the clock input source to the Si5326. The Agilent model E5052B was used for the phase noise measurement. For this measurement, the Si5319 operates at 3.3 V with an ac coupled differential PECL output and an ac coupled differential sine wave input from the RF generator at 0 dBm. Note that, as with any PLL, the output jitter that is below the loop BW is caused by the jitter at the input clock. The loop BW was 120 Hz.

### 2.1. Example: SONET OC-192

Figure 3. Typical Phase Noise Plot

| Jitter Band                     | Jitter, RMS |
|---------------------------------|-------------|
| SONET_OC48, 12 kHz to 20 MHz    | 250 fs      |
| SONET_OC192_A, 20 kHz to 80 MHz | 274 fs      |
| SONET_OC192_B, 4 to 80 MHz      | 166 fs      |
| SONET_OC192_C, 50 kHz to 80 MHz | 267 fs      |
| Brick Wall, 800 Hz to 80 MHz    | 274 fs      |

Figure 5. Si5319 Typical Application Circuit (SPI Control Mode)

# 3. Functional Description

The Si5319 is a jitter-attenuating precision clock multiplier for applications requiring sub 1 ps jitter performance. The Si5319 accepts one clock input ranging from 2 kHz to 710 MHz and generates one clock output ranging from 2 kHz to 945 MHz and select frequencies to 1.4 GHz. The Si5319 can also use its crystal oscillator as a clock source for frequency synthesis. The device provides virtually any frequency translation combination across this operating range. The Si5319 input clock frequency and clock multiplication ratio are programmable through an I<sup>2</sup>C or SPI interface. Silicon Laboratories offers a PC-based software utility, DSPLL*sim*, that can be used to determine the optimum PLL divider settings for a given input frequency/clock multiplication ratio combination that minimizes phase noise and power consumption. This utility can be downloaded from http://www.silabs.com/timing.

The Si5319 is based on Silicon Laboratories' third generation DSPLL<sup>®</sup> technology, which provides any-frequency synthesis and jitter attenuation in a highly integrated PLL solution that eliminates the need for external VCXO and loop filter components. The Si5319 PLL loop bandwidth is digitally programmable and supports a range from 60 Hz to 8.4 kHz. The DSPLL*sim* software utility can be used to calculate valid loop bandwidth settings for a given input clock frequency/clock multiplication ratio.

The Si5319 monitors the input clock for loss-of-signal and provides a LOS alarm when it detects missing pulses on the input clock. The device monitors the lock status of the PLL. The lock detect algorithm works by continuously monitoring the phase of the input clock in relation to the phase of the feedback clock.

The Si5319 provides a VCO freeze capability that allows the device to continue generation of a stable output clock when the selected input reference is lost. During VCO freeze, the DSPLL latches its VCO settings and uses its XO as its frequency reference.

The Si5319 has one differential clock output. The electrical format of the clock output is programmable to support LVPECL, LVDS, CML, or CMOS loads. For system-level debugging, a bypass mode is available which drives the output clock directly from the input clock, bypassing the internal DSPLL. The device is powered by a single 1.8, 2.5, or 3.3 V supply.

#### 3.1. External Reference

A low-cost 114.285 MHz 3rd overtone crystal or an external reference oscillator is used as part of a fixed-frequency oscillator within the DSPLL. This external reference is required for the device to operate. Silicon Laboratories recommends using a high quality crystal. Specific recommendations may be found in the Family Reference Manual. An external oscillator as well as other crystal frequencies can also be used as a reference for the device.

In VCO Freeze, the DSPLL remains locked to this external reference. Any changes in the frequency of this reference when the DSPLL is in VCO freeze will be tracked by the output of the device. Note that crystals can have temperature sensitivities.

#### 3.2. Further Documentation

Consult the Silicon Laboratories Any-Frequency Precision Clock Family Reference Manual (FRM) for detailed information about the Si5319. Additional design support is available from Silicon Laboratories through your distributor.

Silicon Laboratories has developed a PC-based software utility called DSPLL*sim* to simplify device configuration, including frequency planning and loop bandwidth selection. The FRM and this utility can be downloaded from http://www.silabs.com/timing.

## 4. Register Map

All register bits that are not defined in this map should always be written with the specified Reset Values. The writing to these bits of values other than the specified Reset Values may result in undefined device behavior. Do not write to registers not listed in the register map, such as Register 64.

| Register | D7   | D6         | D5                      | D4      | D3      | D2       | D1             | D0       |

See Si5319 Register Map).  | 32            |          |     |              | The device operates from a 1.8, 2.5, or 3.3 V supply. Bypass capacitors should be associated with the following $V_{DD}$ pins:<br>5 0.1 $\mu$ F<br>10 0.1 $\mu$ F<br>32 0.1 $\mu$ F<br>A 1.0 $\mu$ F should also be placed as close to the device as is practical.  |

| Pin #    | Pin Name  | I/O | Signal Level  | Description  |  |
|----------|---|-----|---|--|--|
| 7        | ХВ  | I   | Analog  | External Crystal or Reference Clock.   |  |
| 6        | XA  |     |   | External crystal should be connected to these pins to use internal oscillator based reference. Refer to the Family Reference Manual for interfacing to an external reference. The external reference must be from a high-quality clock source (TCXO, OCXO). Frequency of crystal or external clock is set by the RATE pins.  |  |
| 8, 31    | GND   | GND | Supply  | Ground.  |  |
| 19,20    |   |     |   | Must be connected to system ground. Minimize the ground path<br>impedance for optimal performance of this device. Grounding these<br>pins does not eliminate the requirement to ground the GND PAD on<br>the bottom of the package.  |  |
| 11       | RATE0   | I   | 3-Level   | External Crystal or Reference Clock Rate.  |  |
| 15       | RATE1   |     |   | <ul> <li>Three level inputs that select the type and rate of external crystal or reference clock to be applied to the XA/XB port. Refer to the Family Reference Manual for settings. These pins have both a weak pull-up and a weak pull-down; they default to M. The "HH" setting is not sup ported.</li> <li>Note: L setting corresponds to ground.<br/>M setting corresponds to V<sub>DD</sub>/2.<br/>H setting corresponds to V<sub>DD</sub>.</li> <li>Some designs may require an external resistor voltage divider when driven by an active device that will tri-state.</li> </ul> |  |
| 16       | CKIN+   | I   | Multi   | Clock Input.   |  |
| 17       | CKIN-   |     |   | Differential input clock. This input can also be driven with a single-<br>ended signal. Input frequency range is 2 kHz to 710 MHz.   |  |
| 18       | LOL   | 0   | LVCMOS  | PLL Loss of Lock Indicator.  |  |
|          |   |     | This pin functions as the active high PLL loss of lock indicator if the<br>LOL_PIN register bit is set to 1.<br>0 = PLL locked.<br>1 = PLL unlocked.<br>If LOL_PIN = 0, this pin will tristate. Active polarity is controlled by t<br>LOL_POL bit. The PLL lock status will always be reflected in the<br>LOL_INT read only register bit. |  |  |
| 21       | CS  | I   | LVCMOS  | Xtal/Input Clock Select.   |  |
|          |   |     |   | This pin selects the active DSPLL input clock, which can be a clock<br>input or a crystal input. See the <i>FREE_EN</i> register for free run settings.<br>0 = Select clock input (CKIN).<br>1 = Select crystal or external reference clock.<br>This pin should not be left open.  |  |
| 22       | SCL   | I   | LVCMOS  | Serial Clock/Serial Clock.   |  |
|          |   |     |   | This pin functions as the serial clock input for both SPI and I <sup>2</sup> C modes.<br>This pin has a weak pull-down.  |  |
| 23       | SDA_SDO   | I/O | LVCMOS  | Serial Data.<br>In I <sup>2</sup> C control mode (CMODE = 0), this pin functions as the bidirec-<br>tional serial data port.<br>In SPI control mode (CMODE = 1), this pin functions as the serial data<br>output.  |  |
| Note: Ir | lote: Internal register names are indicated by underlined italics (e.g., <i>INT_PIN</i> . See Si5319 Register Map). |     |   |  |  |

| 25  |        |     | Signal Level | Description  |
|---|--------|-----|--------------|--|
| 25  | A1     | I   | LVCMOS       | Serial Port Address.   |
| 24  | A0     |     |              | In I <sup>2</sup> C control mode (CMODE = 0), these pins function as hardware controlled address bits. The I <sup>2</sup> C address is 1101 [A2] [A1] [A0].  |
|   |        |     |              | In SPI control mode (CMODE = 1), these pins are ignored.   |
|   |        |     |              | These pins have a weak pull-down.  |
| 26  | A2_SS  | I   | LVCMOS       | Serial Port Address/Slave Select.  |
|   |        |     |              | In $I^2C$ control mode (CMODE = 0), this pin functions as a hardware controlled address bit [A2].  |
|   |        |     |              | In SPI control mode (CMODE = 1), this pin functions as the slave select input.   |
|   |        |     |              | This pin has a weak pull-down.   |
| 27  | SDI    |     | LVCMOS       | Serial Data In.  |
|   | _      |     |              | In $I^2C$ control mode (CMODE = 0), this pin is ignored.   |
|   |        |     |              | In SPI control mode (CMODE = 1), this pin functions as the serial data   |
|   |        |     |              | input.   |
|   |        |     |              | This pin has a weak pull-down.   |
| 29  | CKOUT- | 0   | Multi        | Output Clock.  |
| 28  | CKOUT+ |     |              | Differential output clock with a frequency range of 10 MHz to<br>1.4175 GHz. Output signal format is selected by <i>SFOUT1_REG</i> regis-<br>ter bits. Output is differential for LVPECL, LVDS, and CML compatible<br>modes. For CMOS format, both output pins drive identical single-<br>ended clock outputs. |
| 36  | CMODE  | I   | LVCMOS       | Control Mode.  |
|   |        |     |              | Selects I <sup>2</sup> C or SPI control mode for the Si5319.   |
|   |        |     |              | 0 = I <sup>2</sup> C Control Mode  |
|   |        |     |              | 1 = SPI Control Mode   |
| GND   |        |     |              | Ground Pad.  |
| PAD   | GND    | GND | Supply       | The ground pad must provide a low thermal and electrical impedance to a ground plane.  |
| Note: Internal register names are indicated by underlined italics (e.g., INT_PIN. See Si5319 Register Map). |        |     |              |  |

# 6. Ordering Guide

| Ordering Part<br>Number   | Output Clock<br>Frequency Range                  | Package              | ROHS6,<br>Pb-Free | Temperature Range |  |  |  |
|---|--|----------------------|-------------------|-------------------|--|--|--|
| Si5319A-C-GM  | 2 kHz–945 MHz<br>970–1134 MHz<br>1.213–1.417 GHz | 36-Lead 6 x 6 mm QFN | Yes               | –40 to 85 °C      |  |  |  |
| Si5319B-C-GM  | 2 kHz–808 MHz                                    | 36-Lead 6 x 6 mm QFN | Yes               | –40 to 85 °C      |  |  |  |
| Si5319C-C-GM 2 kHz–346 MHz 36-Lead 6 x 6 mm QFN Yes -40 to 85 °C                              |  |                      |                   |                   |  |  |  |
| Note: Add an R at the end of the device part number to denote tape and reel ordering options. |  |                      |                   |                   |  |  |  |

## 7. Package Outline: 36-Pin QFN

Figure 6 illustrates the package details for the Si5319. Table 10 lists the values for the dimensions shown in the illustration.

### Table 10. Package Dimensions

### Notes:

**1.** All dimensions shown are in millimeters (mm) unless otherwise noted.

2. Dimensioning and Tolerancing per ANSI Y14.5M-1994.

3. This drawing conforms to JEDEC outline MO-220, variation VJJD.

**4.** Recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

8. Recommended PCB Layout

Figure 7. PCB Land Pattern Diagram

| Dimension | MIN    | MAX  |  |
|-----------|--------|------|--|
| е         | 0.50 E | BSC. |  |
| E         | 5.42 F | REF. |  |
| D         | 5.42 F | REF. |  |
| E2        | 4.00   | 4.20 |  |
| D2        | 4.00   | 4.20 |  |
| GE        | 4.53   | —    |  |
| GD        | 4.53   | —    |  |
| Х         | -      | 0.28 |  |
| Y         | 0.89 F | REF. |  |
| ZE        | —      | 6.31 |  |
| ZD        | -      | 6.31 |  |

### Table 11. PCB Land Pattern Dimensions

### Notes (General):

- 1. All dimensions shown are in millimeters (mm) unless otherwise noted.
- 2. Dimensioning and Tolerancing is per the ANSI Y14.5M-1994 specification.
- 3. This Land Pattern Design is based on IPC-SM-782 guidelines.
- **4.** All dimensions shown are at Maximum Material Condition (MMC). Least Material Condition (LMC) is calculated based on a Fabrication Allowance of 0.05 mm.

### Notes (Solder Mask Design):

1. All metal pads are to be non-solder mask defined (NSMD). Clearance between the solder mask and the metal pad is to be 60 μm minimum, all the way around the pad.

### Notes (Stencil Design):

- 1. A stainless steel, laser-cut and electro-polished stencil with trapezoidal walls should be used to assure good solder paste release.
- 2. The stencil thickness should be 0.125 mm (5 mils).
- 3. The ratio of stencil aperture to land pad size should be 1:1 for the perimeter pads.
- **4.** A 4 x 4 array of 0.80 mm square openings on 1.05 mm pitch should be used for the center ground pad.

### Notes (Card Assembly):

- 1. A No-Clean, Type-3 solder paste is recommended.
- 2. The recommended card reflow profile is per the JEDEC/IPC J-STD-020 specification for Small Body Components.

# 9. Si5319 Device Top Mark

| Mark Method:    | Laser                      |  |
|-----------------|----------------------------|--|

| Line 3 Marking: | YYWWRF                     | YY = Year<br>WW = Work Week<br>R = Die Revision<br>F = Internal code<br>Assigned by the Assembly House. Corresponds to the year<br>and work week of the mold date. |
| Line 4 Marking: | Pin 1 Identifier           | Circle = 0.75 mm Diameter<br>Lower-Left Justified  |
|                 | XXXX                       | Internal Code  |

# **DOCUMENT CHANGE LIST**

## Revision 0.1 to Revision 0.2

- Changed 1.8 V operating range to ±5%.
- Updated Table 1 on page 4.
- Updated Table 2 on page 5.
- Added table under Figure 3 on page 14.
- Updated "3. Functional Description" on page 16.
- Clarified "5. Pin Descriptions: Si5319" on page 40.

## **Revision 0.2 to Revision 0.3**

- Updated "5. Pin Descriptions: Si5319" on page 40.
  - Corrected Pins 11 and 15 description in table.

### **Revision 0.3 to Revision 0.4**

- Updated Table 1 on page 4.
- Added "9. Si5319 Device Top Mark" on page 47.

### **Revision 0.4 to Revision 0.41**

- Updated Table 1 on page 4.
  - Updated Thermal Resistance Junction to Ambient typical specification.
- Updated Figure 4, "Si5319 Typical Application Circuit (I<sup>2</sup>C Control Mode)," on page 15.
- Updated Figure 5, "Si5319 Typical Application Circuit (SPI Control Mode)," on page 15.
- Updated NC pin description in "5. Pin Descriptions: Si5319" on page 40.
- Updated "7. Package Outline: 36-Pin QFN" on page 44.
- Added Figure 8, "Ground Pad Recommended Layout," on page 45.
- Added register map documentation.
- Updated Rise/Fall Time values.

### Revision 0.41 to Revision 0.42

• Changed register address labels to decimal.

### Revision 0.42 to Revision 0.43

- Updated the following:
  - ESD specifications
  - phase noise values
  - absolute Vdd maximum voltage
  - typical phase noise plot
- Added specification for phase changes due to temperature variation
- Added information for the N32 register
- Added θ<sub>JC</sub> specification

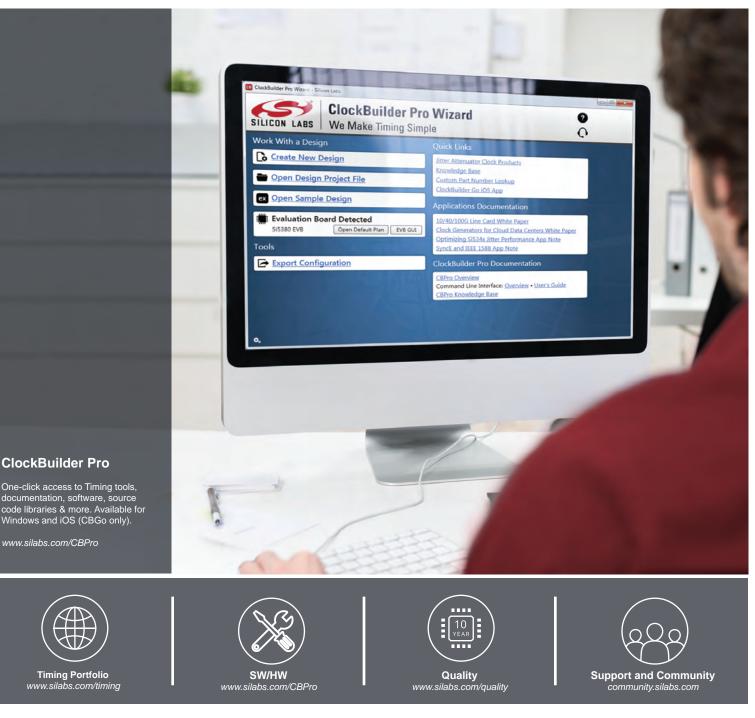

## Revision 0.43 to Revision 1.0

 Replaced the specification tables (tables 1 and 2 from rev. 0.43) with the specification tables from the Si53x Reference Manual, rev 0.42.

# NOTES:

#### Disclaimer

Silicon Laboratories intends to provide customers with the latest, accurate, and in-depth documentation of all peripherals and modules available for system and software implementers using or intending to use the Silicon Laboratories products. Characterization data, available modules and peripherals, memory sizes and memory addresses refer to each specific device, and "Typical" parameters provided can and do vary in different applications. Application examples described herein are for illustrative purposes only.
