## General Description

The 83948I-147 is a low skew, 1-to-12 Differential-to-LVCMOS/LVTTL Fanout Buffer. The 83948I-147 has two selectable clock inputs. The CLK, nCLK pair can accept most standard differential input levels. The LVCMOS\_CLK can accept LVCMOS or LVTTTL input levels. The low impedance LVCMOS/LVTTL outputs are designed to drive 50Ω series or parallel terminated transmission lines. The effective fanout can be increased from 12 to 24 by utilizing the ability of the outputs to drive two series terminated lines.

The 83948I-147 is characterized at full 3.3V, full 2.5V or mixed 3.3V core/2.5V output operating supply modes. Guaranteed output and part-to-part skew characteristics make the 83948I-147 ideal for those clock distribution applications demanding well defined performance and repeatability.

## Features

- Twelve LVCMOS/LVTTL outputs
- Selectable differential CLK/nCLK or LVCMOS/LVTTL clock input
- CLK/nCLK pair can accept the following differential input levels: LVPECL, LVDS, LVHSTL, SSTL, HCSL
- LVCMOS\_CLK supports the following input types: LVCMOS, LVTTTL
- Output frequency: 350MHz
- Additive phase jitter, RMS: 0.14ps (typical)
- Output skew: 100ps (maximum), 3.3V±5%
- Part-to-part skew: 1ns (maximum), 3.3V±5%
- Operating supply modes:
  - Core/Output 3.3V/3.3V
  - 3.3V/2.5V
  - 2.5V/2.5V
- -40°C to 85°C ambient operating temperature
- Lead-free (RoHS 6) packaging

## Pin Descriptions and Characteristics

**Table 1. Pin Descriptions**

Number	Name	Type		Description
1	CLK_SEL	Input	Pullup	Clock select input. When HIGH, selects LVCMOS_CLK input. When LOW, selects CLK/nCLK inputs. LVCMOS / LVTTTL interface levels.
2	LVCMOS_CLK	Input	Pullup	Single-ended clock input. LVCMOS/LVTTTL interface levels.
3	CLK	Input	Pullup	Non-inverting differential clock input.
4	nCLK	Input	Pulldown	Inverting differential clock input.
5	CLK_EN	Input	Pullup	Clock enable pin. LVCMOS/LVTTTL interface levels.
6	OE	Input	Pullup	Output enable pin. When LOW, outputs are in an High-impedance state. when HIGH, outputs are active. LVCMOS/LVTTTL interface levels.
7	V <sub>DD</sub>	Power		Power supply pin.
8, 12, 16, 20, 24, 28, 32	GND	Power		Power supply ground.
9, 11, 13, 15, 17, 19, 21, 23, 25, 27, 29, 31	Q11, Q10, Q9, Q8, Q7, Q6, Q5, Q4, Q3, Q2, Q1, Q0	Output		Single-ended clock outputs. LVCMOS/LVTTTL interface levels.
10, 14, 18, 22, 26, 30	V <sub>DDO</sub>	Power		Output supply pins.

NOTE: *Pullup* and *Pulldown* refer to internal input resistors. See Table 2, *Pin Characteristics*, for typical values.

**Table 2. Pin Characteristics**

Symbol	Parameter	Test Conditions	Minimum	Typical	Maximum	Units
C <sub>IN</sub>	Input Capacitance			4		pF
R <sub>PULLUP</sub>	Input Pullup Resistor			51		kΩ
R <sub>PULLDOWN</sub>	Input Pulldown Resistor			51		kΩ
C <sub>PD</sub>	Power Dissipation Capacitance (per output)			12		pF
R <sub>OUT</sub>	Output Impedance		5	7	12	Ω

## Function Tables

## Absolute Maximum Ratings

NOTE: Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These ratings are stress specifications only. Functional operation of product at these conditions or any conditions beyond those listed in the *DC Characteristics* or *AC Characteristics* is not implied. Exposure to absolute maximum rating conditions for extended periods may affect product reliability.

Item	Rating
Supply Voltage, $V_{DD}$	4.6V
Inputs, $V_I$	-0.5V to $V_{DD} + 0.5V$
Outputs, $V_O$	-0.5V to $V_{DDO} + 0.5V$
Package Thermal Impedance, $\theta_{JA}$	73.6°C/W (0 mps)
Storage Temperature, $T_{STG}$	-65°C to 150°C

## DC Electrical Characteristics

## Additive Phase Jitter

The spectral purity in a band at a specific offset from the fundamental compared to the power of the fundamental is called the ***dBc Phase Noise***. This value is normally expressed using a Phase noise plot and is most often the specified plot in many applications. Phase noise is defined as the ratio of the noise power present in a 1Hz band at a specified offset from the fundamental frequency to the power value of the fundamental. This ratio is expressed in decibels (dBm) or a ratio of the power in the 1Hz band to the power in the

fundamental. When the required offset is specified, the phase noise is called a ***dBc*** value, which simply means dBm at a specified offset from the fundamental. By investigating jitter in the frequency domain, we get a better understanding of its effects on the desired application over the entire time record of the signal. It is mathematically possible to calculate an expected bit error rate given a phase noise plot.

As with most timing specifications, phase noise measurements has issues relating to the limitations of the equipment. Often the noise floor of the equipment is higher than the noise floor of the device.

This is illustrated above. The device meets the noise floor of what is shown, but can actually be lower. The phase noise is dependent on the input source and measurement equipment.

## Application Information

### Wiring the Differential Input to Accept Single Ended Levels

Figure 1 shows how the differential input can be wired to accept single ended levels. The reference voltage  $V_{REF} = V_{DD}/2$  is generated by the bias resistors R1, R2 and C1. This bias circuit should be located as close as possible to the input pin. The ratio of R1 and R2 might need to be adjusted to position the  $V_{REF}$  in the center of the input voltage swing. For example, if the input clock swing is only 2.5V and  $V_{DD} = 3.3V$ ,  $V_{REF}$  should be 1.25V and  $R2/R1 = 0.609$ .

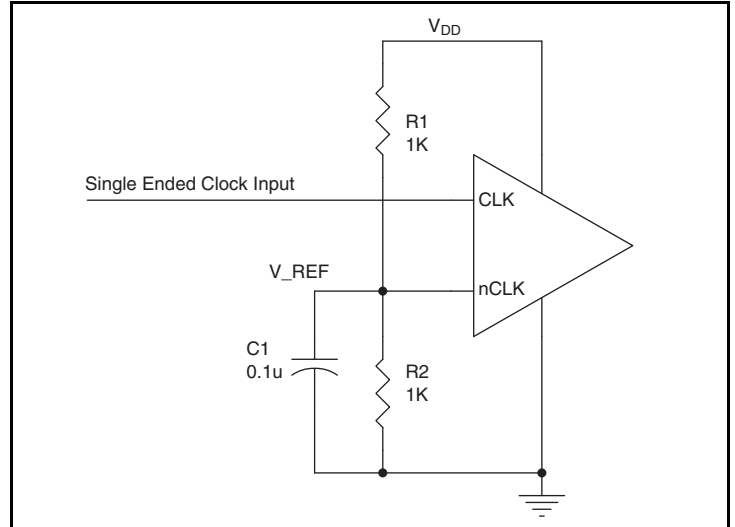

Figure 1. Single-Ended Signal Driving Differential Input

### Recommendations for Unused Input and Output Pins

#### Inputs:

##### CLK/nCLK Inputs

For applications not requiring the use of the differential input, both CLK and nCLK can be left floating. Though not required, but for additional protection, a 1k $\Omega$  resistor can be tied from CLK to ground.

##### CLK Input

For applications not requiring the use of a clock input, it can be left floating. Though not required, but for additional protection, a 1k $\Omega$  resistor can be tied from the CLK input to ground.

##### LVC MOS Control Pins

All control pins have internal pull-ups or pull-downs; additional resistance is not required but can be added for additional protection. A 1k $\Omega$  resistor can be used.

#### Outputs:

##### LVC MOS Outputs

All unused LVC MOS output can be left floating. There should be no trace attached.

## Differential Clock Input Interface

The CLK /nCLK accepts LVDS, LVPECL, LVHSTL, SSTL, HCSL and other differential signals. Both signals must meet the  $V_{PP}$  and  $V_{CMR}$  input requirements. *Figures 2A to 2F* show interface examples for the CLK/nCLK input driven by the most common driver types. The input interfaces suggested here are examples only. Please consult with the

vendor of the driver component to confirm the driver termination requirements. For example, in Figure 2A, the input termination applies for IDT open emitter LVHSTL drivers. If you are using an LVHSTL driver from another vendor, use their termination recommendation.

## Revision History Sheet

Rev	Table	Page	Description of Change	Date
B	T2	1	Features Section - added Lead-Free bullet.	11/21/05
		2	Pin Characteristics Table - changed $C_{IN}$ from 4pF max. to 4pF typical; and added 5 $\Omega$ min. and 12 $\Omega$ max to $R_{OUT}$ .	
	7	Updated <i>Single Ended Signal Driving Differential Input diagram</i> . Added <i>Recommendations for Unused Input and Output Pins</i> .		
	T8	10	Ordering Information Table - added lead-free part number, marking, and note.	
C	T5A T5B	1	Features Section - added <i>Additive Phase Jitter</i> bullet.	1/15/08
		5	3.3V AC Characteristics Table - added <i>Additive Phase Jitter</i> .	
	6	3.3V AC Characteristics Table - added <i>Additive Phase Jitter</i> .		
	7	Added <i>Additive Phase Jitter</i> section.		
	T6	11	Updated <i>Differential Input Clock Interface</i> section.	
12		Updated <i>Reliability Information</i> . Updated format throughout the datasheet.		
D	T4C T5C	1	Features Section - added mix voltage to supply voltage bullet.	4/1/09
		4	Added Mix DC Characteristics Power Supply Table.	
	7	Added Mix AC Characteristics Table.		
	9	Parameter Measurement Information Section - added 3.3V/2.5V LVCMOS <i>Output Load AC Test Circuit</i> diagram.		
	T8	15	Ordering Information Table - deleted ICS prefix from Part/Order Number column.	
D	T1	2	Output supply pins, Changed $V_{DD}$ to $V_{DDO}$	11/1/12
D	T8	15	Removed leaded orderable parts from Ordering Information table	11/14/12
D	T8	15	Fixed typo: removed extra "l" from orderable part number.	7/17/14
		17	Updated Headers and Footers. Updated Contact information.	
D			Removed ICS from part number where needed. Updated data sheet header and footer.	3/30/16

DISCLAIMER Integrated Device Technology, Inc. (IDT) reserves the right to modify the products and/or specifications described herein at any time, without notice, at IDT's sole discretion. Performance specifications and operating parameters of the described products are determined in an independent state and are not guaranteed to perform the same way when installed in customer products. The information contained herein is provided without representation or warranty of any kind, whether express or implied, including, but not limited to, the suitability of IDT's products for any particular purpose, an implied warranty of merchantability, or non-infringement of the intellectual property rights of others. This document is presented only as a guide and does not convey any license under intellectual property rights of IDT or any third parties.

IDT's products are not intended for use in applications involving extreme environmental conditions or in life support systems or similar devices where the failure or malfunction of an IDT product can be reasonably expected to significantly affect the health or safety of users. Anyone using an IDT product in such a manner does so at their own risk, absent an express, written agreement by IDT.

Integrated Device Technology, IDT and the IDT logo are trademarks or registered trademarks of IDT and its subsidiaries in the United States and other countries. Other trademarks used herein are the property of IDT or their respective third party owners.
