Product Description

The P1819 is a Versatile Spread Spectrum Frequency Modulator designed specifically for input clock frequencies from 20 to 40MHz. (Refer to *Input Frequency and Modulation Rate* Table*).* The P1819 reduces electromagnetic interference (EMI) at the clock source, allowing system wide reduction of EMI of down stream clock and data dependent signals. The P1819 allows significant system cost savings by reducing the number of circuit board layers, ferrite beads, shielding, and other passive components that are traditionally required to pass EMI regulations.

The P1819 modulates the output of a single PLL in order to "spread" the bandwidth of a synthesized clock, and more importantly, decreases the peak amplitudes of its harmonics. This result in significantly lower system EMI compared to the typical narrow band signal produced by oscillators and most frequency generators. Lowering EMI by increasing a signal's bandwidth is called 'Spread Spectrum Clock Generation'.
The P1819 is available in different spread deviation, refer to *Spread Deviation Selection* Table.

The P1819 uses the most efficient and optimized modulation profile approved by the FCC and is implemented in a proprietary all digital method.
Applications

The P1819 is targeted towards EMI management for memory and LVDS interfaces in mobile graphic chipsets and high-speed digital applications such as PC peripheral devices, consumer electronics, and embedded controller systems.

Pin Description

Pin#		Pin Name	Type	Description
P1819B	**P1819G**			
1	1	XIN / CLKIN	I	Crystal Connection or external frequency input. This pin has dual functions. It can be connected to either an external crystal or an external reference clock.
2	2	VSS	P	Ground Connection. Connect to system ground.
3		SRS	I	Spread range select. Digital logic input used to select frequency deviation (Refer to *Spread Deviation Selection* Table). This pin has an internal pull-up resistor.
3	3	D_C / NC	I	Digital logic input used to select Down (LOW) or Center (HIGH) spread options (Refer to *Spread Deviation Selection* Table). This pin has an internal pull-up resistor.
4	4	ModOUT	O	Spread spectrum clock output. (Refer to *Input Frequency and Modulation Rate* Table *and Spread Deviation Selection* Table).
5	5	REF	O	Non-modulated Reference clock output of the input frequency.
6	6	PD#	I	Power down control pin. Pull XIN/CLKIN and PD# LOW to enable Power-Down mode. This pin has an internal pull-up resistor.
7	7	VDD	P	Power Supply for the entire chip.
8	8	XOUT	O	Crystal Connection. Input connection for an external crystal. If using an external reference, this pin must be left unconnected.

Note: Pin 3 is NC in P1819Q.
