ZERO DELAY, LOW SKEW BUFFER
MK2304-2
Description

The MK2304-2 is a low jitter, low skew, high performance Phase Lock Loop (PLL) based zero delay buffer for high speed applications. Based on IDT's proprietary low jitter PLL techniques, the device provides four low skew outputs at speeds up to 133 MHz at 3.3 V. The MK2304-2 includes a bank of two outputs running at 1/2X. In the zero delay mode, the rising edge of the input clock is aligned with the rising edges of all 4 outputs. Compared to competitive CMOS devices, the MK2304-2 has the lowest jitter.

The MK2304-2 PLL enters a power-down state when there are no rising edges on the REF input. In this mode, all outputs are tri-stated and the PLL is turned off, resulting in less than 25 μ A of current draw.

IDT manufactures the largest variety of clock generators and buffers and is the largest clock supplier in the world.

Features

- Packaged in 8 pin SOIC
- Zero input-output delay
- Two 1X outputs plus two 1/2X outputs
- Output to output skew is less than 200 ps
- Output clocks up from 10 MHz to 133 MHz at 3.3 V
- Ability to generate 2X the input
- Full CMOS outputs with 8 mA output drive capability at TTL levels at 3.3 V
- Spread Smart™ technology works with spread spectrum clock generators
- Advanced, low power, sub micron CMOS process
- Operating voltage of 3.3 V
- Available in industrial temperature operation
- Pb (lead) free package
- Low Standby Current

External Components

The Mk2304-2 requires a minimum number of external components for proper operation. Decoupling capacitors of 0.1 μ F should be connected between VDD and GND, as close to the part as possible. A 33 Ω series terminating resistor should be used on each clock output to reduce reflections.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the MK2304-2. These ratings, which are standard values for IDT commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
