### 1.0 Key Features

- Phase-locked loop (PLL) device synthesizes output clock frequency from crystal oscillator or external reference clock
- On-chip tunable voltage-controlled crystal oscillator (VCXO) allows precise system frequency tuning
- Typically used for generation of MPEG-2 decoder clock
- 3.3V supply voltage
- Very low phase noise PLL
- Use with “pullable” 14pF crystals – no external padding capacitors required
- Small circuit board footprint (8-pin 0.150” SOIC)
- Custom frequency selections available - contact your local ON Semiconductor sales representative for more information

### 2.0 Description

The FS6128 is a monolithic CMOS clock generator IC designed to minimize cost and component count in digital video/audio systems.

At the core of the FS6128 is circuitry that implements a voltage-controlled crystal oscillator (VCXO) when an external resonator (nominally 13.5MHz) is attached. The VCXO allows device frequencies to be precisely adjusted for use in systems that have frequency matching requirements, such as digital satellite receivers.

A high-resolution phase-locked loop generates an output clock (CLK) through a post-divider. The CLK frequency is ratiometrically derived from the VCXO frequency. The locking of the CLK frequency to other system reference frequencies can eliminate unpredictable artifacts in video systems and reduce electromagnetic interference (EMI) due to frequency harmonic stacking.

7	DO	VSS	Ground
8	AO	XOUT	VCXO drive

Key: AI = Analog Input; AO = Analog Output; DI = Digital Input; DI<sup>u</sup> = Input With Internal Pull-Up; DI<sub>d</sub> = Input With Internal Pull-Down; DIO = Digital Input/Output; DI-3 = Three-Level Digital Input, DO = Digital Output; P = Power/Ground; # = Active Low Pin

## 3.0 Functional Block Diagram

### 3.1 Voltage-Controlled Crystal Oscillator (VCXO)

The VCXO provides a tunable, low-jitter frequency reference for the rest of the FS6128 system components. Loading capacitance for the crystal is internal to the FS6128. No external components (other than the resonator itself) are required for operation of the VCXO.

Continuous fine-tuning of the VCXO frequency is accomplished by varying the voltage on the XTUNE pin. The value of this voltage controls the effective capacitance presented to the crystal. The actual amount that this load capacitance change will alter the oscillator frequency depends on the characteristics of the crystal as well as the oscillator circuit itself.

It is important that the crystal load capacitance is specified correctly to “center” the tuning range. See Table 5.

# FS6128-04

A simple formula to obtain the “pulling” capability of a crystal oscillator is:

$$\Delta f \text{ (ppm)} = \frac{C_1 \times (C_{L2} - C_{L1}) \times 10^6}{2 \times (C_0 + C_{L2}) \times (C_0 + C_{L1})}$$

where:

C<sub>0</sub> = the shunt (or holder) capacitance of the crystal

C<sub>1</sub> = the motional capacitance of the crystal

C<sub>L1</sub> and C<sub>L2</sub> = the two extremes (minimum and maximum) of the applied load capacitance presented by the FS6128.

EXAMPLE: A crystal with the following parameters is used: C<sub>1</sub> = 0.025pF and C<sub>0</sub> = 6pF. Using the minimum and maximum C<sub>L1</sub> = 10pF, and C<sub>L2</sub> = 20pF, the tuning range (peak-to-peak) is:

$$\Delta f = \frac{0.025 \times (20 - 10) \times 10^6}{2 \times (6 + 20) \times (6 + 10)} = 300 \text{ ppm}$$

## 3.2 Phase-Locked Loop (PLL)

The on-chip PLL is a standard frequency- and phase locked loop architecture. The PLL multiplies the reference oscillator frequency to the desired output frequency by a ratio of integers. The frequency multiplication is exact with a zero synthesis error (unless otherwise specified).

Note: Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. These conditions represent a stress rating only and functional operation of the device at these or any other conditions above the operational limits noted in this specification is not implied. Exposure to maximum rating conditions for extended conditions may affect device performance, functionality and reliability.

### CAUTION: ELECTROSTATIC SENSITIVE DEVICE

Permanent damage resulting in a loss of functionality or performance may occur if this device is subjected to a high energy electrostatic discharge.
