## 19MHz to 800MHz Low Phase-Noise VCXO

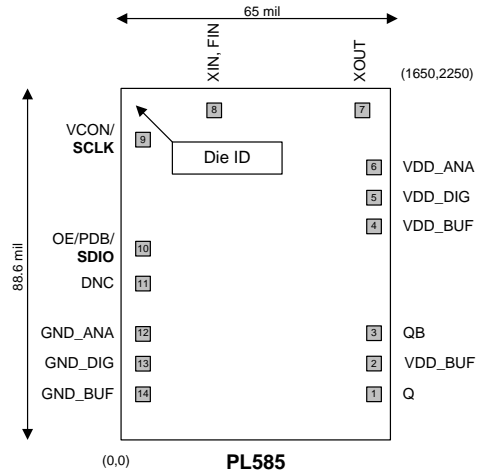

### FEATURES

- < 0.5ps RMS phase jitter (12kHz to 20MHz) at 622.08MHz
- 25ps max peak to peak period jitter
- Ultra Low-Power Consumption
  - < 90mA @622MHz PECL output
  - < 10µA at Power Down (PDB) Mode
- Input Frequency:
  - Fundamental Crystal: 19MHz to 40MHz
- Output Frequency:
  - 19MHz to 800MHz output.
- Output type: LVPECL
- High Linearity VCXO: <10% linearity
- Pullability: ±150 ppm
- Programmable OE input polarity selection.
- Power Supply: 3.3V, ±10%
- Operating Temperature Ranges:
  - Commercial: 0°C to 70°C
  - Industrial: -40°C to 85°C
- Available in Die or Wafer

### DESCRIPTION

The PL585 is a Dual LC core monolithic IC clock, capable of maintaining sub-picoseconds RMS phase jitter, while covering a wide frequency output range up to 800MHz, without the use of external components. The high performance and high frequency output is achieved using a low cost fundamental crystal of between 19MHz and 40 MHz. The PL585 is designed to address the demanding requirements of high performance applications such as Fiber Channel, serial ATA, Ethernet, SAN, SONET/SDH, etc.

**FUNCTIONAL DESCRIPTION**

PL585 family of products is an advanced, programmable LCVCO clock IC that is designed to meet the most stringent performance specifications for phase noise, jitter, and power consumption.

There are two main types of VCOs, a) Ring Oscillator, b) LC Tank oscillator. An LCVCO is made up of an LC tank oscillator. Although a Ring Oscillator has very good performance, and has a good tuning range, its phase noise and jitter performance, in particular at higher frequencies, degrades.

On the other hand, an LCVCO has an outstanding phase noise and jitter performance, even at higher frequencies. PL585 family of products takes advantage of this state of the art technology, and incorporates the LC tank on-chip, for optimal performance.

PL585 family of products exhibit very low phase noise/phase jitter and peak to peak jitter, wide tuning range, and very low-power. All members of the PL585 family accept a low-cost fundamental crystal input of 19MHz to 40MHz, and its flexible

core is capable of producing any output frequency between 19MHz to 800MHz.

**PLL Programming**

The PLL in the PL585 family is fully programmable. The PLL is equipped with a Pre-Scalar to divide down the VCO frequency, and a 5-bit VCO frequency feedback loop divider (M-Counter). The output of the PLL is transferred to a 4-bit post VCO divider (P-Counter), to achieve the desired output frequency.

**OE (Output Enable)**

The OE pin in PL585 family, through programming, can be configured to support OE pin activation with a logic '1' or logic '0', to provide you with the desired enable polarity.

OE Select (Programmable)	OE	State
0	0 (Default)	Output enabled
	1	Tri-state
1 (Default)	0	Tri-state
	1 (Default)	Output enabled

The OE pin incorporates a 60KΩ resistor to either pull-up or pull-down to the default state, when the OE pad is left open.
